Divine Bounty Ashwagandha

It is worth mentioning that it previous studies, ashwagandha has been found to be rich in iron, antioxidants, tannins, potassium, nitrate, fatty acids and glucose.

(Newswire.net -- June 6, 2019) Orlando, FL -- While the modern world is full of convenience and comfort, it is hard to deny that it is full of toxins and environmental pollutants. Unfortunately, exposure to these toxins has been found to cause some undesirable health consequences.

In the United States, it has been found major facilities dump about 7.1 billion pounds of wastes. The bad news is that waste often ends up in water, soil, air, and even in food people consume on a daily basis.

One of these toxins are PCBs (polychlorinated biphenyls), which has been banned in the U.S. for decades. The health risks linked with its exposure is impaired fetal brain development and cancer.

Pesticides are also considered to be major contaminants. Still in the U.S., it has been found that alarming levels of pesticide residue are found in 95 percent of foods.

The Environmental Protection Agency (EPA) warn certain percentages of pesticides are actually carcinogenic. The health risks linked with their exposure are birth defects, nerve damage, Parkinson's disease, miscarriage, nutrient malabsorption, and cancer.

More and more researchers are investigating on the dangerous health effects of a myriad of toxins.

Dioxins are also included in the list, and they are found to potentially trigger skin irritations including a severe skin disease known as chloracne, reproductive and developmental disorders, excessive body hair, liver damage, and cancer.

Aside from reducing or eliminating exposure of these toxins, it is wise to turn to natural measures in warding off cancer.

Fighting cancer in a natural way is one goal that many scientists and researchers are investigating and trying to achieve.

According to researchers, some herbs have shown promise in helping to fight cancer and one is ashwagandha.

It is worth mentioning that it previous studies, ashwagandha has been found to be rich in iron, antioxidants, tannins, potassium, nitrate, fatty acids and glucose.

It also contains steroidal alkaloids – sominine, somniferine, withanolides and anferine as well as flavonoids, acyl steryl glucosides and lactones.

Research suggests this medicinal herb could disrupt the ability of cancer cells to reproduce effectively due to its anti-angiogenic activity.

This has also been found to prevent the formation of new blood vessels by cancer cells to support their growth.

Scientists conducted another research, and they found ashwagandha use led to a marked increase in life span. It has further been found to be responsible in the reduction in the overall tumor weight in animal subjects with cancer of the lymphatic system.

This herb has been believed to be useful in reducing cancer growth and enhancing immune system health.

Some supplements have been found to be useful in delivering ashwagandha's healing goodness, and one is Divine Bounty Ashwagandha (http://www.amazon.com/Organic-Ashwagandha-Capsules-Absorption-

Ashwaganda/dp/B072KFLL6X).

About Divine Bounty

Divine Bounty is a family-owned brand that manufactures high-quality turmeric curcumin supplements. Passionate about the potential health benefits of turmeric, the team behind Divine Bounty have carefully researched and sourced only the best ingredients to create the ideal blend of turmeric curcumin. More details are available at http://www.DivineBounty.com.
