

# Reduce Fat by Increasing Leptin Levels and Leptin Sensitivity With New Supplement

Logan Serpa December 21, 2012

Leptiburn has taken the world of health and wellness by storm since its recent release. Thousands of people around the world are looking to find out reliable facts and figures about this popular weight loss supplement. Independent review website [Leptiburnreview.com](http://Leptiburnreview.com) has unveiled insightful details about this popular program.

FOR IMMEDIATE RELEASE (NEWSWIRE) December 21, 2012 – Boston, MA

Recently introduced fat loss supplement Leptiburn is rapidly growing in terms of its popularity throughout the world. Many users claim that this product can provide fat loss benefits that compare to none other in the present market. However, it is always advisable to cross check the physiological background of any such product before deciding to invest time and money on it. [Leptiburnreview.com](http://Leptiburnreview.com), an independently operated review website, has just published the findings of their detailed research indicating that the secret behind the success of this program is centered on a fat burning hormone named Leptin. This hormone not only enhances the rate of metabolism, but also controls the functioning of many other fat loss hormones.

[Leptiburnreview.com](http://Leptiburnreview.com) informs that rigorous dieting and workout regimens are most likely to fail because of ever decreasing [Leptin](#) levels within the body. Studies suggest that the level of this important hormone can reduce by 50% within a week of starting a diet plan, resulting in a dramatic reduction, in fat burning. This happens because the primary function of Leptin is to protect the human body against starvation. The efficiency of fat burning programs or products is also influenced by Leptin sensitivity. In order to receive maximum results, it is important that the Leptin receptors within the body are extremely sensitive. Leptiburn program consists of few easy steps to satisfy both these conditions in order to generate unmatched results.

[Leptiburnreview.com](http://Leptiburnreview.com) also reveals that many of the Leptiburn ingredients are proven to have a positive impact on production and sensitivity of Leptin. Irvingia Gabonensis, Oleanolic Acid, Panax Notoginseng, Modifilan®, and Green Tea are the natural ingredients that play a significant role behind the excellent results achieved so far by this program. Talking about this weight loss program, a senior researcher from [Leptiburnreview.com](http://Leptiburnreview.com) said, "Unlike any other program known to us, Leptiburn takes a scientifically proven approach to increase Leptin level and sensitivity. We feel that this system can work for anyone looking to lose fat with minimum efforts".
