

Add Gold to your IRA for Stability in Troubled Times

Jodie Rose December 31, 2013

IRA Planning with Gold, urges people to learn more about their Gold IRA rollover options and follow what the world's wealthy have been doing for years now, investing in assets that are protected from inflation.

(NewsWire.net -- December 31, 2013) Jacksonville, FL --

IRAPanningwithGold.com believes that Gold IRA investments are an option not known to many investors. This lack of awareness, leads many to lose their hard-earned life's savings and end up with deminished retirement savings that fail to provide the standard of life they deserve in retirement.

Mikhail Prokhorov has over \$6 billion invested in gold and Carlos Slim, the second-richest man on earth is urging for a shift of investments from the financial realm towards the real economy. Part of the real economy is physical assets such as gold which is not affected by the US debt or inflation.

"It only makes sense to want to invest one's life's savings in assets that are safe, secure and profitable, as opposed to those prone to devaluation and tormented by every possible crisis in the world."

IRAPanningwithGold.com reports that retirement assets should be a portfolio of investments including those not be backed by the American dollar or other currencies that are getting weaker and weaker due to consecutive sharp devaluations. It is not wise to be totally dependent on a financial system ridden by economic uncertainty, political uncertainty and tormented by large-impact environmental disasters and geo-political tensions. Individuals should have the opportunity to have control over their assets and safeguard them against such risks.

Gold Ira Rollover

Gold is essentially borderless, its value is the same across continents. The American dollar, as with most major currencies, is not backed by precious metals anymore and its basically fictional money created through debt. Its devaluation seems to have no end in sight. The economic uncertainty and today's frail stability do not bode well for putting all one's eggs in one basket. For that reason, nesting one's IRA into gold provides the safety and peace of mind, dollar-based, or other currency based IRA accounts cannot.

In point of illustration, gold value increased by 600% since 2001 which is an unprecedented increase not likely to happen for the other physical assets. This and other stats show how imperative it is to save IRA investments by rolling them over to Gold IRAs to safeguard their value and increase their returns.

A [Gold IRA rollover](#) is essentially a transfer of existing IRA savings between two custodians and its investment in gold to protect one's savings from the seemingly inevitable dollar collapse. Government shutdowns and the ever-present threat of a default, should alert more people into considering safer and more viable investment options.

With the gold price coming down offers investors an amazing opportunity to buy into gold. Gold may not see the highs it has in the past but for investors looking to invest in gold, this is a great opportunity at this time.
