Salt Lake City, Utah (April 20, 2010 NEWSWIRE) - ClearCenter, a leading provider of open source Network, Gateway and Server solutions, today announced ClearBOX 300 - a network

hardware appliance for small businesses and distributed IT environments. The first of a planned product line, ClearBOX 300 adds an optimized and supported hardware option to ClearCenter's portfolio of products and services. ClearBOX 300 ships pre-installed with ClearFoundation's ClearOS which delivers all the necessary functionality to manage the IT environment of the average SMB. ClearOS is a modular, open-source, operating system for the Network, Gateway and Server that can be tailored to serve the unique needs of small business and distributed IT environments. [ClearBOX 300](#) starts at \$1,199 and is available for purchase from the [ClearCenter web site](#) and from [ClearCenter's partners](#) in North and South America during Q2-2010 and worldwide starting in Q3-2010.

"The ClearBOX 300 compliments ClearOS perfectly by providing an optimized and supported hardware platform", explained Michael Proper, CEO of ClearCenter. "Partners and end users will be able to deploy ClearOS knowing the software and hardware have been fully tested and are fully supported by ClearCenter. With its flexible configuration, ClearBOX 300 can be tailored to meet the needs of the local site with integrated services such as Remote Server Backup, Remote System Monitor, and Content Filter Updates."

ClearBOX 300 is an integral part of the ClearCenter mission to provide comprehensive Network, Gateway and Server solutions to small business and distributed IT environments. Combined with ClearOS Subscriptions, ClearSDN Services and ClearCARE Support, ClearBOX 300 completes the ClearCenter solution for multiple markets including Home, Business, Government, Education, Healthcare and Not-for-Profit customers. The ClearBOX product line will soon be expanded with additional hardware models and configuration services.

ClearBOX 300 comes loaded with an extensive feature set out of the box:

Users & Group Management	Port Forwarding	Configuration
Domain & LDAP	Psec VPN	Content Filter
Directory Import/Export	OpenVPN	Web Proxy
