

# Swiffer Replacement Becomes Cleaning Product Of The Year

Chris Ryan January 07, 2014

Swiffer Replacement

**In short, the Green Glider can be compared to The Swiffer. It is a mop device that makes use of changeable pads. However, unlike The Swiffer new pads don't have to be purchased between uses.**

([Newswire.net](http://Newswire.net) -- January 7, 2014) New York , NY --

Cleaning the home is of the utmost importance to most homeowners. Most people want to ensure their home is properly cared for and that it maintains a specific level of cleanliness. This is specifically true of those individuals that own a home that has a large number of wood or linoleum based floors. These types of floors must be cared for on a day-to-day basis if they are expected to last for years to come and continue to look attractive for years to come.

Wood and linoleum based floors can't be cared for like carpeted floors. Most people assume that using a general mop is the best way to care for these types of floors. However, that is completely untrue. Those individuals that want to clearly care for and maintain the look of their floors must seek out a popular and proven mop alternative such as the Green Glider.

The Green Glider is one of the most unique and powerful floor cleaning tools a homeowner can elect to add to their cleaning arsenal if they want to ensure the look and life of their floors.

### What Is The Green Glider And Why Should I Purchase It?

The Green Glider is a revolutionary cleaning tool created by Tanya Lewis. She devised the Green Glider as a means to save money when cleaning the home and to also ensure the health of her children when cleaning the home.

In short, the Green Glider can be compared to The Swiffer. It is a mop device that makes use of changeable pads. However, unlike The Swiffer new pads don't have to be purchased between uses. The pads of the Green Glider are completely reusable and can be washed in the laundry between uses. By making use of the Green Glider instead of the Swiffer one can instantly save themselves a great deal of money.

### What Sets The Green Glider Apart From Other Like Products?

Though there are numerous products on the market today that are made to clean wood or linoleum floors, the Green Glider is designed with a Shammy on the inside of the pad to absorb liquid and cleaning products. It is also crafted with microfiber on the outside to clean the surface it is used for. It is also adjustable and can easily fit the mop you

already own.

One of the main attractions of the Green Glider is the fact that it has fabric latches that hold the pads in place on the mop. Most mops of this type make use of Velcro on the bottom and don't fully hold on to the pad. This can result in the pad falling from the mop head. This can be quite frustrating when a person is cleaning their home.

#### How To Use The Green Glider

Keep in mind that the Green Glider is one of the easiest to use cleaning tools available on the market today. Unlike general mops, the Green Glider can be used again and again. The pads are simply removed between uses and are washed by hand or in the washing machine. This is something that can't easily be done with general mops.

The mop pad is placed on the head of the mop and is then dipped in cleaning products. The mop can then be used, after sweeping the surface of the floor with a broom. Not only can the mop pad be used to clean the floors within the home but many homeowners have used this pad to also clean their walls from top to bottom. This is something that can't easily be done if one were to attempt to do this with a general mop. In doing so the full surface area of the wall or floor would not be able to be cleaned properly.

If you are serious about saving money tired of swiffer disposable mops and want to ensure you are capable of properly cleaning the floors within your home or place of business, you have no other option than to invest in the Green Glider. With a single purchase you can instantly save yourself a great deal of time and money and can ensure the floors in your home are constantly clean.
