

# Affordable, Accessible Health And Safety Training With Online Safety Services

Shaun Mengella February 09, 2014

Health And Safety Courses

**Government legislation means that every company has to comply with health and safety guidelines. However, attending health and safety courses and ensuring that a company is in full compliance with all the legislation isn't always easy.**

Online Safety Services offers online health and safety courses, meaning that staff and employers never need to step outside of the office in order to complete their training.

For the client's convenience, the health and safety courses are available from any Internet connected hand held device and can be completed in the employees – or employers – own time.

With the online health and safety courses, a company can guarantee that it will always be compliant with all of the latest guidelines and that employees will be aware of the best practice when it comes to ensuring their safety at work.

The health and safety courses offer everything from correctly positioning screen equipment to avoid work-related injuries such as RSI, fire awareness safety and avoiding trips, slips and falls. Online Safety Services also offer many other training courses and all at competitive prices; some of the courses can be completed from just £14.95 per person.

Online Safety Services can also cater for multiple-users of the same course and our staff will be happy to discuss license fees for multi-user training.

To find out more about the company and how Online Safety Services can help, or to book a course, visit our website at:
