

Whole Body Vibe Brings Blood Microscopy Services to SoCal

David Mocerì August 28, 2014

As one of the few regional providers of live and dried blood microscopy, Whole Body Vibe hopes to bring this health examination method to a larger population.

(Newswire.net -- August 28, 2014) Huntington Beach, CA --

Though holistic health centers are common sights in Southern California, relatively few of them offer live and dried blood microscopy. Kimba Fonte-Tule, the founder and owner of

Whole Body Vibe, has chosen to address this gap and is now performing the service for clients in and around Huntington Beach, CA.

Live and dried blood microscopy is a procedure in which a trained professional examines a person's blood. Both fresh and dried blood samples undergo close investigation. The fresh samples provide an immediate snapshot of the person's level of health. The dried samples show changes in the quality of health over time.

This procedure can reveal a great deal about the person's overall level of well-being. High acid levels, toxicity, mineral deficiency, and other health issues can all be detected through live and dried blood microscopy. Once the specific health problem is identified, a solution can be found.

Whole Body Vibe offers a number of holistic health treatments that are designed to cleanse and strengthen the body. One of the most popular therapies is the juice cleanse. In this, clients go on diets that exclusively consist of fresh juice made from organic fruits and vegetables. Other therapies include colonic hydrotherapy and infrared sauna sessions.

The importance of live and dried blood microscopy lies in the fact that it allows for more targeted organic therapy. By performing this analysis, Whole Body Vibe gains a better understanding of clients' health needs. This, in turn, leads to improved health.
