

Six Month Smiles Is Revolutionizing Braces

Jeff Hopp September 10, 2014

A new orthodontic treatment has revolutionized the way adults obtain smiles they are proud to show off. With the Six Month Smiles system, individuals over the age of 15 can have their smiles perfected in, on average, just six months.

(Newswire.net -- September 10, 2014) Castle Rock, Colorado -- According to Dr. Scott Brody of Castle Rock Family Dental, "**Six Month Smiles** is a short-term orthodontic treatment intended to give patients straight, healthy teeth using a system that is a bit different from traditional braces. Basically, the Six Month Smiles system utilizes the best aspects of traditional braces in a modified way to provide straighter smiles in an average of 6 months."

Six Month Smiles is a **cosmetic dentistry** solution intended to fit into the busy lifestyles of adults. While traditional orthodontics is concerned with correcting bite issues and achieving perfect alignment according to textbook standards, Six Month Smiles is more concerned with simply correcting the aesthetic appearance of crooked, crowded or unevenly spaced teeth. By focusing on only the cosmetic aspect of a healthy smile, the system allows dentists to realign the teeth in just a few months.

Straightening one's smile with **Six Month Smiles** is simple. The process begins with a complete exam and the obtaining of impressions and x-rays of the teeth. The impressions, along with a case submission script detailing the desired results, are sent off to the Case Processing Facility where a bracket specialist determines the exact locations where brackets should be placed to obtain the desired result. Then, the specialist creates bonding trays that make it quick and easy for the dentist to correctly place the braces on the patient's teeth.

Once the tray arrives, the patient returns to the office so the braces can be put on. The system uses Lucid-Lok clear brackets and tooth-colored wires that are barely visible and more comfortable than traditional braces. Once the braces are in place, patients will be seen approximately every four weeks so the braces can be readjusted. When the teeth have reached the final position, the braces are removed, and patients are able to enjoy beautiful smiles they are proud to show off.

"At Castle Rock Family Dental, we are proud to offer unique solutions for **teen and adult braces**. With systems like Six Month Smiles, we are able to restore confidence to adults who want straighter teeth without undergoing traditional orthodontic treatments," says Dr. Brody. **Castle Rock Family Dental** is currently accepting patients for an introductory special of \$500 off Six Month Smiles, and can be reached by calling 303-688-2229.
