New Copper Knee Brace from G7-Solutions

A new copper infused compression knee brace from G7-Solutions is among the latest sports injury supports that has been launched to help speed up recovery time.

(Newswire.net -- October 10, 2014) Tby, Sweden -- A new [copper infused compression knee brace from G7-Solutions](#) is among the latest sports injury supports that has been launched to help speed up recovery time. The knee brace is said to be suitable for both athletes and regular persons, regardless of their lifestyles.

Knee injuries are among the most common joint injuries that people suffer from and can happen to anyone, no matter how active or inactive they might be. As such, knee braces are often required to assist with the healing process from issues such as torn ligaments, strains and other joint and muscle related mishaps. However, many persons, particularly athletes, want to recover as quickly as possible so that they can return to their regular lifestyle activities such as sports.

The knee brace from G7-Solutions is said to help speed up recovery time based on its design and make up. For starters, it is composed of 88% copper nylon thread and only 12% spandex. This copper component is believed to be a contributor to accelerated recovery since the metal has been reputed as an effective treatment for arthritis and other pain related issues. As a result, the compression knee sleeve is said to promote better blood flow which helps to speed up the recovery of injured muscles and joints. Additionally, the device is said to provide a snug, comfortable fit that offers unmatched support to stiff and sore muscles. This is thought to help reduce pain much quicker and reduce the discomfort that normally accompanies knee injuries and muscle strains, thereby further speeding up recovery.

“This knee sleeve gave me just the right level of support, kept my joint warm, and after just a few days I’m almost back to my pre-injury workout.” – Cate612.

In addition to speeding up recovery time, the knee brace from G7-Solutions is also said to be suitable for everyday wear. This is due to the fact that it won’t cause itching or rashes and is made with a breathable material that is antibacterial and anti-odor. These features are believed to make it the [best knee brace to be worn during recovery](#) as it not only speeds up the process but the user can continue to wear it even after recovery, without any issue.

Persons wishing to purchase this knee brace, whether to try and speed up their knee joint discomfort or as a preventative measure, can find it on Amazon. The product comes in several popular sizes, ranging from small to extra-large.
