bioidentical hormone replacement therapy

**Bioidentical Hormone Replacement Therapy Treatments Popular At Kansas Medical Clinic. Pierce Clinic is located in Overland Park, KS but also serves residents coming from Missouri.**

([Newswire.net](#) -- October 9, 2014) Overland Park, KS -- Morris Coltrain of Pierce Medical in Overland Park, KS, recently announced increased growth in numbers of clients seeking bioidentical hormone replacement therapy in their clinic. According to him, it can all be attributed to the quality and effectiveness of their services in this area. The clinic has in

top quality, safe pharmaceuticals to help both men and women who are suffering from reduced hormone production especially as they get older.

[Bioidentical hormone replacement therapy](#) is a procedure that is used to replace hormones that the body may be lacking. Men and women exhibit different symptoms when their hormone levels decline. Similarly, the hormones also vary. In women, they include cortisol, DHEA, Estrogen, Progesterone, and Testosterone. In men, testosterone is the troublesome hormone. Women may experience, weight gain, mood swings, exhaustion, anxiety, hot flushes, low libido and poor sexual performance, poor sleep patterns as well as lack of mental clarity. In men, the symptoms may include low libido, erectile dysfunction, irritability, exhaustion, reduced muscle mass and inability to focus.

The Pierce Medical clinic serves clients mainly from Kansas City, Overland Park, Kansas and Missouri. We asked Morris what makes clients choose them over other medical facilities that offer the same services in the area. "One thing that we have established quite clearly is that no 2 patients have the same needs. Each person will have a unique combination of hormones. That is why we take the time to test and then tailor solutions for each client who comes to us. We test saliva and we do it in-house ensuring that we get results fast; our patients don't have to wait."

Another reason why Pierce Medical is so popular is the fact that they use drugs from PCAB accredited companies only. Their treatments have been scientifically tested and proven safe. Clients, according to Morris, can be sure that they will not suffer any side effects.

Other services ordered in the clinic include a laser hair removal service, a [HCG weight loss service](#), cellulite reduction, chelation therapy and appetite suppressants for those who want to control how much they eat.

How about bioidentical hormone replacement cost? Morris explained that since they have invested in their own lab which has already paid for itself, they are able to keep costs affordable. The costs may vary from client to client depending on their particular needs.
