

Falconi Energy Announces Ductless Cooling Systems

Steven Dubin June 03, 2015

Falconi Energy of Southborough, MA provides brand leader Mini-Split Ductless Cooling Systems that are energy efficient and highly effective.

(Newswire.net -- June 3, 2015) Southborough, MA --There's a lot to be said for everyday comfort. During the summer, many of us enjoy an air-conditioned commute to a temperature-controlled workplace and, lunch at an air-conditioned restaurant. Yet, at the day's end, we go home to a stifling house.

Falconi Energy, a leading supplier of premium heating oil and a full-service heating and cooling company based in Southborough, MA offers a "cool" solution for homeowners who have old, inefficient window air conditioner units and those who do not have central air or the ducted system required for it.

Falconi Energy provides brand leader Mini-Split Ductless Cooling Systems that are energy efficient and highly effective. Instead of central air's bulky and costly ducts and indoor evaporator unit, a ductless cooling system utilizes thin copper tubing, and the compressor and condenser units are located outside the home.

At half the cost of a central air system and noticeably quieter than inefficient, conventional window units, mini-split ductless cooling systems are the future of home comfort. Advantages include energy cost-savings, same-day installation, and room-by-room zoned comfort. Ductless cooling systems also improve indoor air quality with a multi-stage filtration system that reduces dust, pollen and allergens in the home.

Recycle Old Window A/C Units

Catering to the homeowner's unique cooling requirements, Falconi Energy provides custom installation of single zone or multi-zone wall, floor, and ceiling mounted units. Mini-Split Ductless Cooling Systems are affordable and begin at \$3,500 installed. The company offers 0 percent loan programs for qualified customers to help with the transition to a new ductless cooling system. Falconi Energy will also recycle old window air conditioner units, and encourages "trade-in" of window units at the time of ductless system installation.

"New technology makes it simple to have the same comfort as a central air system at a fraction of the cost," explained Jim Falconi, president. "Not only that, but unlike central air, split ductless cooling systems do not use harsh coolant so they are better for the environment. Homeowners now have an environmentally-friendly, energy efficient, cost-effective (and quiet) way to cool their homes."

Ductless Mini-Split Heat Pump Rebate

Homeowners who opt for a Ductless Mini-Split cooling unit with heat pump (which provides cooling and heating for year-round comfort) may be able to take advantage of additional savings by way of a COOL SMART rebate. To learn more about the Ductless Mini-Split Heat Pump rebate and download a brochure and application, visit www.masssave.com/residential/heating-and-cooling.
