El Paso Cosmetic Surgery announces its purchase of miraDry, a system to prevent sweat stains and odor.

([Newswire.net](http://www.newswire.net) -- July 23, 2015) El Paso, TX --El Paso Cosmetic Surgery announces that it now offers miraDry, a system designed to eliminate unsightly sweat stains, odor and perspiration under the arms. miraDry is a non-invasive and FDA-cleared treatment that permanently eliminates the sweat and odor glands that are located in the underarm area.

As only two percent of the body's sweat glands are in this area, this poses no risk to the patient. The procedure has been performed successfully more than 30,000 times worldwide.

The procedure delivers precisely controlled electromagnetic impulses to the underarm area that completely eliminate the underarm sweat glands. Most patients see an immediate 82 percent reduction in underarm sweat, and many find that they have no more need for deodorants, sprays or chemicals.

El Paso Cosmetic Surgery as seen at <http://www.elpasoplasticsurgery.com/miradry-medspa> now offers miraDry through its state-of-the-art MedSpa. The procedure can be performed with a local anesthetic so that there is no discomfort. Patients usually return to regular activities almost immediately after treatment.

Dr. Sozer and his team also perform all types of cosmetic and plastic surgery including face lifts, brow or chin implants, liposuction and body contouring. For more information, see the El Paso Cosmetic Surgery website.

About El Paso Cosmetic Surgery: Dr. Ozan Sozer is a practiced Board Certified Plastic Surgeon with more than 20 years of experience.
