

5 Features Power Shower Scrubbers Should Have

Awais Ahmed May 19, 2017

Shower scrubbers are great for both commercial use and home use.

Power shower and tile scrubbers have revolutionised the tedious task of cleaning bathrooms. They quickly and efficiently remove mould, soap clumps and give the bathroom a nice shine.

(Newswire.net -- May 19, 2017) -- Power shower and tile scrubbers have revolutionised the tedious task of cleaning bathrooms. They

quickly and efficiently remove mould, soap clumps and give the bathroom a nice shine. Shower scrubbers are great for both commercial use and home use. Selecting which shower scrubber to buy is not a difficult task if you know exactly what you want. It is ideal to enlist all the features you need in a scrubber so when you go to make the actual purchase, you are not handed an unsatisfactory product.

Long Handle

[Good power shower scrubbers](#) always include a long handle option. In fact, it is best if the handle is changeable. Short for easier to reach and long for showers that are tall and have mould on their showerheads that need to be cleaned frequently and accumulate algae fast.

Drill

A drill is a must have feature for power shower scrubbers. The drill provides the motorised scrubbing motion that makes cleaning so efficient with this tool. An ideal drill will have different motions of the brush like rotatory and back and forth motion. The different motions of the brush can be used for cleaning different kinds of dirt that would require ages to clean with a manual brush, simply and without wasting time.

Multiple brush options

The best kinds of power shower scrubbers have options of changing the brushes. The changeable brushes either come packed with the scrubber or can be bought separately from vendors if we tell them the brand and the model. The smaller brushes are used to clean hard to reach areas of a showerhead that are covered with algae or other bumpy areas. The larger kinds of brushes are used mainly to clear large parts of the shower or even tiles, bath tubs and toilets without too much effort. Certain brushes exist for cleaning up dirt that has accumulated long enough to be very difficult to clean. Many people prefer to change brushes for applying soap and then clearing out the soap before watering it out.

Liquid soap compartment

The best kinds of shower scrubbers come with a built in soap compartment, where the recommended soap can be filled and refilled to ensure proper cleaning. The soap is propelled toward the brush and is then applied to the area to be cleaned out in a scrubbing motion, and then it is scrubbed out or watered away.

Convenience Features

Shower scrubbers come in all sorts of varieties: cordless, hand-held, electrical, or attached to larger machinery. The cordless power shower scrubber is operated by batteries or is chargeable. It can be carried easily to different bathrooms in the house for cleaning purposes, without needing an outlet. The power of each kind of shower scrubber varies; the heavy-duty high power kinds of scrubbers work best for industrial purposes or for people who have big, fancy bathrooms. For most home cleaning purposes, light-weight, handheld scrubbers work best as they are stored easily and consume less power.
