Tips for Air Conditioning Efficiency

These inexpensive and simple tips for air conditioner efficiency can help you lower the costs of keeping your home cool.

([Newswire.net](#) -- March 19, 2019) -- The costs of running your home cooling system continue to rise, making it vital to get maximum cooling for the least amount of money. There are a number of things that can be done to improve the air conditioner efficiency. Here are the tips for air conditioner efficiency to get you started for when the warmer season comes around.

Tips for Air Conditioner Efficiency

1. Remember to Check All of Your Seals

When there are [air leaks](#) in your home, it can rob you of valuable cooling dollars. Why pay money to cool off your home only to have drafty windows and walls blow it all away. When you seal in the crevices and cracks around all of your windows, doors, and electrical outlets, you dramatically reduce any energy lost and lower energy bills.

2. Increase Your Household's Insulation

One of the biggest wastes of cooling energy in your home is poor attic insulation. Check to see that you have the top amount of insulation in your attic that will prevent energy leakage in the working of an air conditioner.

3. Make Sure Air Vents Can Flow Freely

Many homes that have forced air cooling systems have vents (sometimes called registers) on the floor. If the vents are blocked by furniture, household clutter, or curtains; air gets blocked from flowing freely and properly through the house. This lowers efficiency of your cooling system and by removing any blockages, it will also help your [air conditioner work better](#).

4. Service Your Cooling System Regularly

Nobody wants to pay for service calls when their air conditioning is broken down, but getting a technician to check your system out annually can lead to a dramatic reduction in your utility bills. The service technician will ensure that your system works at peak efficiency and can help identify problems well before they become a financial burden. That way, if your air conditioner problem is that it is not cooling properly, you can quickly get the problem identified and solved.

5. Install Ceiling Fans

Believe it or not, ceiling fans can keep you warmer in the winter and cooler in the summer. Air gets easily trapped at the ceiling level. With a [ceiling fan](#), the air gets mixed around better and circulates more efficiently. It's an easy way to keep the overall temperature in your home more comfortable year round.

6. Reduce the Temperature Slightly

Something to try is reducing the temperature slightly, because every degree can make a big difference and you might not even notice it all that much but you will see a difference in the cost.

7. Turn the AC Unit Off

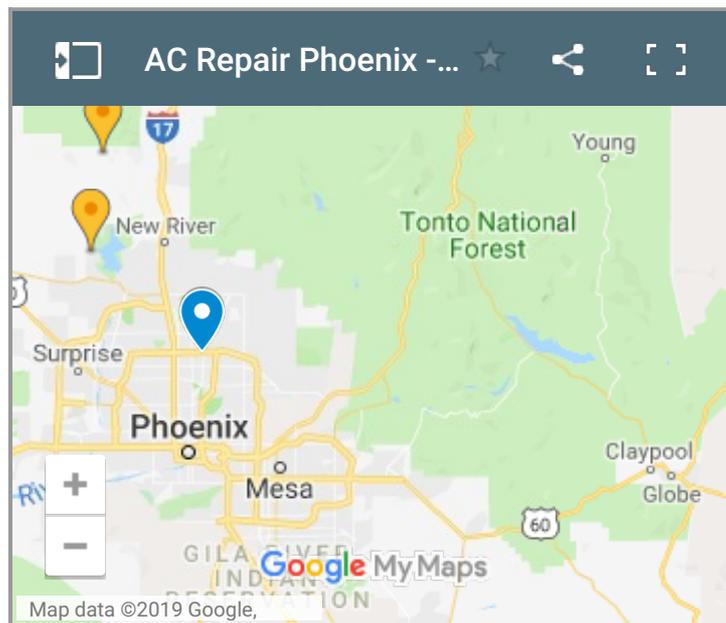

One tip is to be very careful when you are not around to turn the ac unit off or to lower it. By doing this, you will reduce your bills by a good amount and you won't even notice the difference.

8. Use Energy Savers

Another thing to have in mind is that you are using energy savers when you can because that is a good way to save yourself some cash and often times you don't lose out on comfort.

Bottom Line

There are many ways to save, but in order to do so, you'll have to take some action. These inexpensive and simple tips for air conditioner efficiency can help you lower the costs of keeping your home cool. Many require a simple trip to your local DIY center and an afternoon's work.
