

# Bugs-R-Us Brings Experience To Houston Homeowners For Roach Control

Carl Staffel September 25, 2013

Roach Control

**Texas Bugs-R-Us offers full professional methods for the eradication of insects and other pests such as roaches, ants, and termites. The techniques and products are safe for household members, yet effective against unwanted pests.**

([Newswire.net](http://www.newswire.net) -- September 25, 2013) Houston, Texas -- Texas Bugs-R-Us and Calvin Thigpen are pleased to announce that infestations of roaches can be controlled and eliminated by using the services and products offered by the Houston roach control firm. The resilient insects bring dirt, disease and odors to households where there is an issue with a large and expanding number of the pests. Providing solutions to homeowners and commercial clients in a safe and effective manner is the goal of the firm.

A company spokesperson explains, "Cockroaches are not welcome anywhere. The four major species that are typically found indoors range in size up to two inches. They particularly like to invade places in the home where food is plentiful. Because the creatures eat almost anything, they will carry diseases from one location or person to another. We know that the smell of some roaches is so pervasive that it makes food unpalatable. Because the insects shed their skin, it and the droppings can be very harmful to individuals with asthma, or to young children."

He continues, "A single roach can rapidly become a major infestation. Getting rid of a large population can be almost impossible for do-it-yourself projects. The insects quickly become resistant to poisons, making control even more difficult. It's best to call in the professionals, who have the tools, supplies and experience to eradicate even large populations of the creatures."

Calling a professional exterminator to identify the scope of the problem and recommend solutions is the best method of bringing a pest infestation under control. Roach control is a matter of choosing the right products and applying them in a way that is harmless to humans and pets, but destructive to the pest. Bugs-R-Us sets high standards so that customers receive the best possible service. The professional technicians are knowledgeable of the latest in techniques in pest control, which enables us the firm to customize effective treatment plans for every situation.
