North Florida Thermography Offers Women New Breast Screening Option

Jim Wood  October 04, 2013

Thermography is a non-invasive, simple, no-touch, no radiation screening using a sensitive digital infrared-sensing camera that shows the body’s thermal patterns and can serve as a mammogram alternative for some women.

(Newswire.net -- October 4, 2013) Jacksonville Beach, Florida --

North Florida Thermography, specializing in preventative health screenings using infrared imaging, offers a new breast screening option that gives women a clearer picture of their breast health. While not a replacement for a mammogram, thermography is a non-invasive, simple, no-touch, no radiation screening using a sensitive digital infrared-sensing camera that develops a color image on a computer of the body’s thermal patterns. Certain kinds of diseases, like tumors, increase blood flow that causes an increase in temperature that can be seen on a thermographic scan.

The thermography scan is an especially good mammogram alternative for women with dense breast tissue, implants or who are nursing or pregnant and a mammogram is not a good option.

Jacksonville-based North Florida Thermography is a certified iScan Medical Imaging Center and the only thermography center in the region. All scans are interpreted by board-certified physicians and forwarded to a patient’s personal physician.

“October is breast cancer awareness month, but breast health should be top of mind for women all year long,” said Jane Davis Payamps, thermographer with North Florida Thermography. “Thermography is the only screening that can demonstrate whether estrogen dominance, a potential risk factor for the development of breast cancer, fibrocystic breasts, uterine fibroids and ovarian cysts, is affecting the breasts. This scan offers patients a real time story of what’s happening in the body.”

During the month of October, North Florida Thermography is offering $50 off a single area scan and $100 off a full body scan. North Florida Thermography has two convenient locations for Jacksonville residents one in the Jacksonville Beach area at 1361 13th Ave S, Suite 140, Jacksonville Beach, FL 32250 and the other near the I-95 and JTB intersection at 7235 Bonneval Road Suite#200 Jacksonville, FL 32256. For more information, call (904) 910-8737 or visit NorthFloridaThermography.com.

About North Florida Thermography

North Florida Thermography is a certified iScanHD Medical Imaging Center in Jacksonville Beach, FL. The mission of iScanHD Centers is to create a health care standard of excellence using thermography as a significant screening tool for preventative healthcare. Through infrared technology, the body’s real story can be revealed making thermography ideal for preventive medicine. Early detection and the opportunity for timely investigation and intervention are key
advantages for both patients and physicians. North Florida Thermography.com
