

# New Engineering Education Website Launched

Brian Hanson November 01, 2013

Engineering Course

**Online Engineering Class is a new online education resource for students considering a career in engineering. Site visitors to [OnlineEngineeringClass.com](http://OnlineEngineeringClass.com) are able to explore information about engineering degree programs and schools around the USA.**

([Newswire.net](http://Newswire.net) -- November 2, 2013) Seattle, WA -- Online Engineering Class, a new online higher education information resource, is now open on the Web.

The [OnlineEngineeringClass.com](http://OnlineEngineeringClass.com) site helps site visitors find schools that offer engineering degrees and classes.

"Engineering is a terrific field to get into," said site publisher Faith Unger, "Many fields of engineering are highly regarded by employers and are highly recruited at graduation time."

A popular section of the [OnlineEngineeringClass.com](http://OnlineEngineeringClass.com) web site is the form that allows visitors to instantly research universities that offer classes in what they are interested in. Users can research educational institutions either by where the schools are located or by the types of degrees they offer.

Unger stated that one of the great features of engineering is the level of different specialties and career options. "There are so many different fields of engineering for the undergraduate student to choose from," said Unger, "They can choose from such a diverse assortment of majors that almost any student can find something that they can be interested in."

Unger also brought up that not all schools offer the same types of engineering degrees and some are better-known than others. "If you know which branch of engineering you want to get into, you should really do your research and enroll at one of the schools known for that specialty," continued Under, "Of course, the better-known schools will also be harder to get accepted into, but if you can make it in and if you can finish your four years of classes, you will be rewarded during your senior year by the potential employers that visit on recruitment day."

"Engineering can be a fascinating field to get into," Unger concluded, "And it can also be one of the more practical fields to get into as far as career opportunities and average pay are concerned. Most schools don't require their incoming freshmen to know which specialty they wish to get into until later, so new students have a while to explore their options before picking their specific field. We highly recommend that students who may have an interest in becoming an engineer at least consider it."

About Online Engineering Class

OnlineEngineeringClass.com is a website that provides information about engineering degrees and education options for future engineers. For additional information, check out <http://www.onlineengineeringclass.com>.
