

Seal Systems Introduces Ways to Refurbish Natural Stone

RL Imre January 09, 2014

Seal Systems

Seal Systems offers several techniques that have been developed through years of research to safely restore the beauty of natural stone.

([Newswire.net](#) -- January 9, 2014) Rancho Santa Margarita, California -- For the very best in Saltillo tile cleaning in Orange County, residents have long turned to one of the most trusted names in tile work: Seal Systems. As a premier [tile and grout cleaner in Orange County](#), Seal Systems not only cleans, repairs and replaces [Orange County Mexican pavers](#) and other types of tile but has become known as one of the most accessible and professional [tile and grout cleaners in Orange County](#).

However, one service that Seal Systems offers that many Orange County residents are not aware of is natural stone refurbishment. Many people believe that if they install granite, quartz or marble countertops in their kitchens or bathrooms or if they use these substances on their floors, they will never have to worry about cleaning or sealing. This is simply untrue.

Natural stone does not show wear as easily as some substances, but tiny cracks and crevices in the stone can cause dirt, bacteria and water to build up, leading to a dull appearance and ultimately to damage in the stone itself.

Before the stone is installed, it is important to understand how it should be sealed. If the stone is not sealed properly immediately after installation, or if it is cleaned incorrectly, damage can result. Seal Systems can analyze the condition of natural stone and take one or more of the following steps:

- **Stripping.** Sometimes, a poor product has been used to seal the stone, resulting in an uneven shine or a dull streaked appearance. Seal Systems uses safe, natural products to strip the stone and then reseals it correctly, leading to a much more beautiful appearance and longer-lasting shine.
- **Cleaning.** It is critical that the cleaners used on natural stone be the right type to avoid damaging or discoloring the stone. Seal Systems uses the proper cleaning products to ensure a professional finish.
- **Sealing.** Every Seal System job finishes with the right sealant applied by hand for maximum beauty and perfect results.

About Seal Systems: Seal Systems offers a full line of grout and tile cleaning and restoration services. Seal Systems professionals can clean, repair, install or restore Mexican pavers in Orange County as well as other types of tile and natural stone.
