

# Stainless Steel Containers Recommended As Safe Alternatives For San Francisco Residents

M Marketing November 23, 2014

Stainless Steel Thermos by R.C. Optimum

Since October 1, 2014, San Francisco outlawed the sale of water in 21 ounces or less plastic bottles. Commuters in the area are now encouraged to travel with their personal water bottles while using city property, including parks and roadways.

(Newswire.net -- November 23, 2014) Elwood, Elwood AU -- R.C. Optimum's stainless steel bottle could be the alternative residents in San Francisco can turn to in order to avoid getting in trouble with the law.

Plastic is a popularly used material for food storage and preparation containers, however most of them are not environmentally friendly. Along with the non-friendly nature of plastic containers to the environment, they have been proven to cause more harm to the human health than good. For this reason, they are not recommended for use with food today.

The Environmental Agency reported that 32 million tons of plastic waste was generated in 2012 and only 9% of that waste plastic was recovered for recycling. Improper disposal of plastic bottles negatively impacts the environment. It can affect soil fertility, cause the death of animals, and pollute rivers, streams and lakes which are major sources of potable water.

The San Francisco municipal government has sought to implement this austere ban to ratify the problem that improper disposal of plastic bottles costs the environment. Stainless steel containers are seen as safer, "no-risk" options that could replace the need for the traditional plastic container. For this reason R.C. Optimum has stepped up to the plate to offer a **100% stainless steel thermos** for consumers, especially those in San Francisco.

The San Francisco ban on plastic bottles outlaws the sale and use of single use bottles of drinking water - 21 ounces or less - on city property for indoor events. The city's consumers are being encouraged to take along their personal water bottles when they go out in public places.

Consumers can turn to stainless steel thermos bottles for travelling instead of BPA plastic bottles since the manufacturing technique used is less harmful than that which is used for plastic bottles. Professional chefs and food aficionados, like Rachel Ray, recommends the use of stainless steel containers and tools for food or beverages instead of plastic because they are free of toxins.

The [stainless steel thermos by R.C. Optimum](#) is suitable for hot and cold beverages and soups and can maintain the temperature for up to 18 hours. It is also comes with an insulated black coating that eliminates sweating and transfer of heat. According to product owner, Robyn Coventry, "If you're looking for the ideal bottle for travelling with your water or any other beverage, especially around San Francisco, our stainless steel thermos is what you need."

R.C. Optimum is offering all new customers \$4.99 off their purchase of stainless steel thermos with coupon code
