Gone are the days of needing to spend 1000's on recording equipment or studio sessions. Now one can easily make studio quality beats on their PC or MAC from the comfort of your own home.

([Newswire.net](#) -- January 20, 2015) -- Every aspiring producer has been offered a unique opportunity to create professional-grade beats without having to purchase expensive equipment. This is thanks to a new digital beat making software called [Dr. Drum](#).

Dr. Drum is designed to help aspiring producers to create beats on their Mac or PC without requiring any extra equipment. It is specifically targeted towards people with little or no music production experience or even training. This includes aspiring producers, amateur producers or regular people who simply desire to express their musical creativity. It is designed to help such people to produce professional-sounding beats across a wide spectrum of musical genres including Hip Hop, R&B, Tecno, Trance, West, Dub-Step, Jungle and House.

According to sources at Dr. Drum, the software is designed to provide a simple, user-friendly and affordable platform from which people can create their favorite beats. As such, the software features an intuitive interface which requires minimum learning time to master. It is also packed with a number of tools which can be used to create, mix, synthesize and export beats.

Among these tools is a 16-track sequencer which is designed to simplify composition, editing and mixing of beats. The sequencer makes it easy for even a novice to begin making beats within a relatively short time. Another useful tool is a 4-Octave Keyboard which can be used to add Guitars, Pianos, Strings, Synth, FX and other components required to make a pro grade beat.

Dr. Drum's other features include a 12 pad drum machine, 16 tracks of stereo sound and a 44.1 stereo 16bit PCM .wav file export option. The export option is especially invaluable since the 44.1 stereo format preserves the musical integrity of the beat thereby maximizing its pro-grade sound quality. All these features combine to make Dr. Drum an efficient software for producing professional-grade beats.

What sets Dr. Drum apart from other beat making software is the sheer simplicity with which it takes to create a beat. This software doesn't require someone to have a musical background in order to use it. It also doesn't require previous beat making experience. All that a user needs to have is a rough idea of how they want their beat to sound like. The software can help them to make their idea to come alive in a matter of ours.

The key to Dr. Drum's simplicity lies in its extensive digital database. The software is packed with thousands of professional-sounding drumbeats, stereo imaged sounds and instrument samples. All these sounds are already professionally mastered. Therefore, anyone making a beat simply has to locate the different sounds from the database, arrange them according to their inspiration, and their beat will be good to go.

Dr. Drum's simplicity of use makes it the ideal beat making software for enthusiasts and beginners. It can enable such

people to make professional-sounding beats without having to go through the steep learning curve which is typically required to make such beats. The software is also self contained i.e. it doesn't require any external hardware such as a mixer or amplifier to make beats. All that is required is a Mac or PC, and an eagerness to get started.

In a nutshell, Dr. Drum is the perfect solution for anyone who desires to enter the world of beat making. It is perfect for the novice, amateur, enthusiast or aspiring professional. It can provide a solid platform through which a person can hone their beat making skills. Best of all, it is very affordable.

The software is currently available for a limited time offer of \$29.95. This is 90% of its actual market price which is \$329.95. As such, anyone who has always desired to make beats should take advantage of this limited-time offer.
