New Product Launch Kybella®

Andrew Leonard  February 05, 2016

Palm Beach Plastic and Cosmetic Surgery Announces Launch of New Product called Kybella® that will reduce moderate to severe submental fat.

(Newswire.net -- February 5, 2016) West Palm Beach, Florida -- Dr. Fredric Barr and the staff at Palm Beach Plastic & Cosmetic Surgery are excited to introduce Kybella® to their wide range of in-office injectable cosmetic procedures designed to provide clients with a rejuvenated and youthful look.

Kybella® is the first and only FDA-approved injectable that is used to reduce moderate to severe submental fat – more commonly known as a “double chin” - and to tighten and define the neckline.

Kybella® is a formula that contains deoxycholic acid, a substance that is naturally produced in the body to break down and reabsorb dietary fat. During a treatment session, Kybella® is injected into multiple areas below the chin, destroying fat cells so they can no longer store or accumulate fat. Many clients see visible results in 2-4 sessions. Once the desired effect is achieved, there is usually no need to receive further Kybella® injections.

As a leader in the Cosmetic and Reconstructive Surgery industry, Dr. Barr is pleased to be one of the very first plastic surgeons in Palm Beach offering Kybella® injection. With over 30 years of experience, clients can be assured of expert and personalized service with exceptional results.

If you would like to know more about Kybella® injections or are ready to book your appointment, contact the professionals at Palm Beach Plastic & Cosmetic Surgery today for your FREE consultation at 561-833-4122. Ask us anything from questions about the procedure to financing options - we are always happy to hear from you.
