

# Striker Targets Creates Innovative Target Stand

Tyler Collins March 25, 2016

Striker® Targets are crafted from AR500 steel.

**Striker® Targets recently announced the creation of their innovative Universal Target Stand, which is portable and versatile for shooting practice.**

([Newswire.net](http://www.newswire.net) -- March 24, 2016) La Verne, California -- The creative minds at Striker® Targets and Tactical Gear in La Verne,

California are at it again. The company recently announced that they're now offering an innovative target design called the [AR500 Universal Target Stand \(UTS\)](http://www.strikertargets.com/ar500-targets/). This durable new stand is designed to be easy to transport, easy to set up and versatile enough for a variety of shooting activities. Like the other products made by the company, the UTS is crafted from tough steel, including the AR500 ballistic steel front plate. "Our Universal Target Stand is perfect for practice, competition, or just having fun," says Brent Lippincot, president of Striker®. "The AR500 front plate allows the target to withstand most common rifle and pistol calibers." To learn more about this unique target stand and the other targets the company manufactures, visit <http://www.strikertargets.com/ar500-targets/>.

The company designed their Universal Target Stand to be easy to assemble, requiring simple hand tools to affix two bolts that hold the unit together while in use. It breaks down into a compact package when shooting is finished for the day. The stand even includes a built-in handle to allow easy transport. The Striker® UTS can hold up to three targets at once, giving shooters the flexibility to practice different techniques or use different firearms without the constant need for resetting targets. "We put a lot of effort into designing an industry leading target stand," adds Brent. "The UTS represents our commitment to producing the best [AR500](http://www.strikertargets.com/) equipment on the market."

Striker® uses the same ballistic-resistant AR500 steel to craft a variety of practice targets, including animal silhouettes, reactive targets, and target plates used in competitions sanctioned by the International Practical Shooting Confederation (IPSC). The very same steel is used by the company to manufacture a line of body armor plates that meet NIJ Level III protection. In the armor plates, a specialized coating is applied to reduce fragmentation of the steel when struck by projectiles. Every steel product is manufactured by Striker® Targets in the California headquarters, which also houses a retail store where customers can find a full line of survival gear, protective apparel, and tactical equipment. To learn more about the company and their retail location, visit <http://www.strikertargets.com/>.

## About Striker® Targets

With decades of experience in the shooting industry, the California-based Striker® Targets and Tactical Gear is an industry leader in AR500 targets, body armor, and tactical gear. The company manages a very user-friendly website, or you can visit their impressive, fully-stocked showroom in person. Striker's outstanding selection of tactical gear far exceeds that of its competitors, and they are your go-to source for all your tactical needs.
