AZCOMP Launches Medisoft U Webinar Series

Monthly Medisoft webinar training beginning April 14, 2016 by AZCOMP lets health care professionals maximize their use of Medisoft software.

(Newswire.net -- April 13, 2016) Mesa, Arizona -- Small, independent medical practices have made Medisoft software their first choice for medical billing, scheduling and electronic medical records keeping. AZCOMP Technologies, Inc., a national provider of medical billing and EMR software and hardware, announces a monthly webinar training series for users of the Medisoft programs.

"Even with the popularity of Medisoft, we believe that most users are only making use of a fraction of the program's capabilities," according to a spokesman for AZCOMP Technologies. "The Medisoft training is designed so everyone, from beginners to experienced users, will benefit from it."

AZCOMP has long been known for the online training and technical support services it offers to medical professionals using Medisoft, Lytec and Practice Choice software packages. Its new webinar series concentrates only on topics of interest to users of Medisoft.

Each month, beginning with the Webinar on April 14, one or two features of the software package will be highlighted by instructors who will share tips and tricks for effective utilization of the software. Each session will end with a question and answer segment during which health care professionals and practice managers can get expert answers to their questions about the program.

The following schedule for the series and the topic for each session was announced by the company:

• April 14, 2016 at 10 a.m. Pacific Time: "Medisoft Office Hours Tips & Tricks"
• May 12, 2016 at 10 a.m. Pacific Time: "Effectively Use The Medisoft Statement Management Window"

Each session will run for 30 to 60 minutes including the question and answer session. The company encourages beginners to participate in each webinar, but the sessions are designed for those users who already possess at least a working knowledge of the Medisoft program. Beginners might want to sample some of AZCOMP's free online training by visiting their YouTube channel. This will help increase familiarity with Medisoft along with these webinars. The online training that is available includes a Medisoft clinical demo and another demo offering an overview of the billing and EMR features. Users can also have specific questions answered before or after the scheduled webinars by purchasing one-on-one training from AZCOMP.

Those interested in participating in the Medisoft webinars are encouraged to sign up in advance to receive emailed reminders and registration information for each of the monthly sessions. They can sign up by going to the Events section of the AZCOMP Technologies website. Registration for the April 14 Medisoft U webinar is now open and can be accomplished by going to the website at http://azcomp.com/ or by calling 1-888-350-3393 for further details.
