Nature’s Choice Launches New Product—Beta Glucan

Tyler Collins October 05, 2016

Beta Glucan is offered in both capsule and raw powder form.

launched their new product. Called Beta Glucan 85 Max, the supplement is recommended for maintaining or stimulating the effectiveness of the immune system. This new product has been added to Nature’s Choice’s line of nutritional supplements, which are all of high potency and quality.

Nature’s Choice Supplements is widely recognized for manufacturing nutritional supplements that cannot easily be found anywhere else. Established by the companies owner, a health professional with broad experience in the nutrition and supplements field, the company commits to providing quality supplements made from the finest ingredients. The owner makes the formulas for the products himself, and later hires independent laboratories to test them for purity and potency. All of Nature’s Choice products are made and tested in the United States.

Beta glucan, according to Nature’s Choice, is a soluble fiber or a starch called a storage polysaccharide. Found in the cell walls of plants, bacteria and fungi, it is among the most researched nutritional supplements in the world. Many studies have already shown its efficiency as a safe, natural and cost-efficient immune system booster.

Research suggests that beta glucan works in treating an array of health problems and diseases, including diabetes, cholesterol, cancer and HIV/AIDS. In addition, it can also be applied to the skin to heal wounds, burns, dermatitis, radiation burns and diabetic ulcers. Beta glucan is especially used as an immune booster in individuals with a weak immune system caused by stress, chemotherapy, chronic fatigue and other conditions. Beta glucans, unlike other agents, do not become overactive; therefore they do not worsen auto-immune conditions such as yeast infections, allergies, multiple sclerosis, lupus and rheumatoid arthritis.

Beta glucans are derived from various sources, including barley, oats, bacteria, algae, fungi, lichens and yeasts. Each source differs in the amount and kind of beta glucan it can provide. Mushrooms and yeast, for example are beta 1,3/1,6 glucans, while barley and oats are beta 1,3/1,4 glucans. The best beta glucans, according to studies, are beta 1,3-D glucans, which are purified from the cell walls of baker’s yeast. 1,3-D glucans’ positive effects have been detailed in numerous research papers. Beta Glucan 85 Max is a 1,3-D glucan and is highly potent, making it a good source of the agent.

Even with Beta Glucan 85 Max’s high potency, Nature’s Choice recommends that this supplement be taken in conjunction with a healthy lifestyle. The immune system can be returned to its best condition if Beta Glucan 85 Max is taken along with having proper diet, moderate exercise, and adequate rest. The supplement is offered in both capsule and raw powder form.
