Activated Charcoal Potentially Helps End-Stage Renal Disease

Melissa Scott  July 26, 2017

Divine Bounty’s activated charcoal is considered to be extremely useful as it is highly potent and pure. It also comes with a complete customer satisfaction guarantee.

(Newswire.net -- July 26, 2017) Orlando, FL -- Activated charcoal is one of the natural alternatives that is considered to be beneficial for body detoxification. There are also other possible health benefits linked with the use of this amazing ingredient, especially for those suffering from certain conditions.

Activated charcoal may be potentially helpful against end-stage renal disease. This natural alternative is particularly known for its body cleansing abilities. It has even been a popular subject in many scientific research studies and clinical trials.

It is believed to be effective in eliminating the toxins from the body. When these toxins accumulate, it can wreak havoc to health. This may then potentially lead to the onset of a variety of conditions. It is also worth mentioning that activated charcoal is considered safe to use, which means it doesn’t cause any significant adverse effects.

In addition to its possible detoxifying abilities, it is also used for other purposes such as in filtering water or whitening teeth.

In terms of renal disease, this natural ingredient has actually been found to be helpful in some studies. According to some experts, abstract chronic dialysis is a reasonable therapeutic option in the ESRD patients who are categorized as “very elderly”.

However, it is important to understand that the decision to perform dialysis has been found to have little impact on survival. There are many sufferers who are at older ages and haven’t opted to start a chronic dialysis.

Activated charcoal is thought to be an inexpensive option as it works as an adsorbent for nitrogenous products. The researchers actually studied a combination of oral-activated charcoal and low protein diets. It was found that this combination decreased serum area as well as creatinine levels in ESRD sufferers who were in the advanced stages of aging. These patients refused to undergo chronic dialysis.

Through the combination, none experienced edema, oliguria, anuria, significant metabolic acidosis, or hyperkalemia. None of the sufferers suffered from significant gastrointestinal symptoms.

Further, after a week and ten months of activated charcoal use, the researchers observed a significant reduction not just in blood urea, but also the levels of creatinine.

The researchers concluded that in individuals who are over 80 years of age, the combination may potentially help control uremic symptoms effectively.

There are many food-grade activated charcoal supplements available in the market today. This is why experts suggest that consumers should take prudent care in choosing the right formula.

Divine Bounty’s activated charcoal is considered to be extremely useful as it is highly potent and pure. It also comes with a complete customer satisfaction guarantee.
