

Quality Equipment & Spray Is Now Curtis Dyna-Fog Distributors

Matthew O'Brien September 23, 2017

Phoenix-based pest control equipment company are now approved distributors and qualified repair center for the full line of Curtis Dyna-Fog products.

(Newswire.net -- September 21, 2017) Scottsdale, AZ -- Quality Equipment & Spray, and its Professional Pest Control Products website, Qspray.com are approved full-line Curtis Dyna-Fog distributors. Additionally, Quality Equipment & Spray is approved as a qualified repair center for Curtis Dyna-Fog products and will offer online training on many of these products.

Curtis Dyna-Fog provides industry-leading vector control pest control equipment for over 70 years. Unlike many of the imported foggers on the market today, Curtis Dyna-Fog products are made in America and built to last.

Foggers are used by pest control professionals around the world to treat a variety of pest problems and infestations such as mosquitos, flies, roaches, etc. Foggers can also be used to apply products quickly to large areas such as warehouses, hospitals, nursing homes, greenhouses, restaurants, apartments, schools,

In addition to insecticides, [foggers can be used](#) to apply disinfectants, deodorizers, fungicides, miticides, germicides, etc.

It is important to select the correct fogger based on target pest, droplet size, application rate, portability, the product to be applied, etc. When selecting a fogger, it is important to consider droplet size. The smaller the droplet size the longer it will remain airborne and the more likely it will contact the target pest. Examples: Aerosol Spray: 50 microns / ULV Fogger: 20 microns / Thermal Fogger: 5 microns

Droplet size must be large enough to contain a lethal dose to kill the target pest. For example, mosquitos have a much lower lethal dose than house flies.

Here are some examples of Curtis Dyna-Fog 's most popular products.

[Golden Eagle Thermal Fogger](#) easily, effectively and economically dispenses oil-based insecticides, fungicides, odor control and other chemical products. The electric starting system assures greater reliability and ease of operation. The portable Gold Eagle fogger allows precision control of fog output indoors or outdoors to control zika, malaria, dengue fever, etc. No other portable machine of this size can match the Golden Eagle's output.

Hurricane Portable Electric Aerosol Applicator is cost-effective as 110 Volt workhorse dispenses both oil and water-based insecticides, germicides and disinfectants. Adjustable output from 0-5 gallons per hour makes it great for large or small areas. The Hurricane is used effectively in warehouses, hospitals, restaurants, schools & nursing homes.

Cyclone Ultra Handheld ULV Sprayer's sophisticated metering ensures tiny particle size (under 20 microns) regardless of product being applied. Ideal for pest control work in hospitals, green houses, apartment buildings, homes, schools, restaurants, etc. Apply pesticides, deodorants, fungicides, miticides, much more safely, efficiently and economically. Great for both indoor/outdoor applications where 5-20 micron size is required.

Qspray.com is a leading pest control equipment website focused on providing all the equipment, parts and pieces you need to keep your Pest Control company operating efficiently, effectively and profitably.
