Resveratrol Could Aid in Male Fertility and Erectile Dysfunction

Melissa Scott  October 24, 2017

The Resveratrol supplement of Divine Bounty contains a combination of various therapeutic ingredients, such as green tea, grape seed, red wine, and Acai fruit. (Newswire.net -- October 24, 2017) Orlando, FL -- Today, many people turn to a variety of natural remedies to improve their overall health, fight diseases, and even improve their ability to procreate. Infertility and sex-related problems are actually affecting millions nowadays.

There are actually many products and treatments available. These treatments have been thought to be helpful, but there are those that are unsafe and ineffective to use. The good news is that there are natural remedies believed to be both safe and efficient reducing the risk of these problems.

Resveratrol could aid in male fertility and erectile dysfunction. This natural remedy is popularized by the antioxidant properties it contains. It also has anti-inflammatories, which are potentially helpful against inflammation-related conditions.

According to recent research, resveratrol could prevent both low sperm counts and erectile dysfunction (ED).

The anti-inflammatory and antioxidant properties of resveratrol could potentially decrease free radical damage, which affects the corpus cavernosum, vascular structures, and muscle tissue in the penis.

It could further aid in the enhancement of smooth muscle functioning as well as in the increase in the levels of glutathione. This natural antioxidant could aid in the maintenance of cellular health.

Resveratrol could work with the medications used for erectile dysfunction by increasing the amount of nitric oxide inside the body. It is important to remember that the body actually needs adequate amounts of nitric oxide for the maintenance of vascular and peripheral nerve health.

It is particularly helpful in relaxing the walls of the blood vessels, improving dilation, and allowing proper blood flow. When there are insufficient amounts of nitric oxide inside the body, it could lead to cardiovascular disease and ED.

There are certain pharmaceutical drugs that depend on sufficient levels of nitric oxide in generating an enzyme, which helps control blood vessel dilation. Resveratrol has the potential to improve nitric oxide levels.

It does so by activating the sirtuin genes and decreasing oxidative stress, which is believed to reduce levels of nitric oxide.

One of the risk factors of erectile dysfunction and male infertility is cigarette smoking.

In 2010, data was published that found supplementation of resveratrol has significantly reduced the risk of oxidative damage to the urogenital tissue of lab rats. The damage was due to nicotine.

It has also been found that resveratrol aided in the increase of sperm counts and mobility. It has also increased the levels of testosterone without adding to the weight of the body.

A recent study went even further by testing diabetic rats suffering from impaired erectile function. It was found that the resveratrol group experienced an improvement in ED, unlike the group treated with the pharmaceutical drug.

Resveratrol supplementation could be an extremely helpful remedy for men who suffer from sex and fertility problems. It is worth remembering that this natural remedy has also been linked with a variety of healing effects.

Thus, it is easy to assume that taking resveratrol supplements could significantly help in improving overall health. It is loaded with antioxidants, which are believed to have the ability to fight a myriad of diseases and disorders.
One of the most recommended resveratrol supplements comes from Divine Bounty. The Resveratrol supplement of Divine Bounty contains a combination of various therapeutic ingredients, such as green tea, grape seed, red wine, and Acai fruit.
