Ortho-Tain® HealthyStart™ is addressing doctors on the future of pediatric dentistry, offering solutions to biggest health concerns such as sleep disordered breathing.

(Newswire.net -- October 19, 2017) -- Speaking of sleep, and everyone is, Ortho-Tain® HealthyStart™ is the world leader ahead of the hottest topic in pediatric dentistry with a permanent solution, when started early and with compliance. Over 40 million children in America are affected by Sleep Disordered Breathing. Today, HealthyStart™ introduces an on-line, Continuing Education for dentists and orthodontists, backed by 50 years and nearly 4 million cases treated with advanced orthodontic / orthopedic appliances. HealthyStart™ leads in the education of doctors and certification to treat young children and in bringing awareness to parents. A televised special overview on the early signs and outward symptoms of Sleep Disordered Breathing will air several times over the next few weeks in selected cities.

Training the next 100 doctors. HealthyStart™ has mapped out the role of the Dentist through the success of 50 years in treatment advances, to arrive at a comprehensive and permanent solution that goes beyond Band-Aids for life. The next 100 doctors in the on-line classroom will be virtually trained by the inventor himself, Dr. Earl O. Bergersen, DDS, MSD, ABO. Dr. Bergersen, with a 37-year private practice, taught for 25 years at Northwestern Dental School and went on to invent, with over 500 current U.S. and International patents, the treatment leading the profession today.

Learn at ADA, about the Technology of Our Generation at HealthyStart™ (Booth 2018) at noon both Friday and Saturday. HealthyStart™ shares 50 years of innovation as the World Leader in Orthodontic Appliances. Dr. Amanda K. Wilson DDS, MDS and Dr. Diana Batoon, DMD are becoming frequently requested keynoters, with this timely overview. They will address the international dental professionals, who come to sharpen their skills and return to their communities with the best solutions to the biggest health concerns.

40 million children is a staggering concern. In America, 9 out of 10 children present with at least one symptom of SDB, according to Brooke Stevens, BS, University of Michigan, Earl O. Bergersen, DDS, MSD, ABO “The Incidence of Sleep Disordered Breathing Symptoms in Children from 2 to 19 Years of Age”, in JAOS Winter 2016 issue. The outward signs surface early and treatment can start at around the age 2, to the outside range nearing the adolescent years from roughly 10-12. This crisis affects oral habits in children impacting their Growth and Development, Airway and Sleep. This becomes a medical problem that now has a dental solution and the consequences facing these children, if left untreated, are unacceptable.

Prevent early or treat with Band-Aids for life. The objective is to catch a child in their growth and development phase to retrain the tongue posture to swallow correctly and to rest on the roof of the mouth for nasal breathing. Nasal breathing is the healthy and safe way in which we are meant to breathe. ‘Mouth Breathing’ is a damaging ‘gate-way habit’ linked to many problems which are shown below, in a longer list of symptoms that produce unhealthy consequences. Every night without quality sleep is unhealthy for a child on a critical timeline, for their growth and development.

Every day, children are misdiagnosed with symptoms that look like the behaviors of ADHD and are often medicated before SDB is ruled out. These medications do not help a child with SDB, they further hamper their performance and distract doctors and parents from the real solution. Other symptoms are overlooked as common traits or parents are told their child will grow out of it. Wrong. They grow into it. The associated crooked teeth, bed-wetting, allergies and
other symptoms affect everything from self-image to physical growth and development.

**Reaching parents is essential.** Awareness for parents, educators and all medical professionals with the tools to identify the Outward Symptoms related to this unnatural and unhealthy condition is needed. They do not know this, it is not often taught in Dental or Medial School. It is taught in Continuing Education that must reach the parents as well. Learn what to look for, why it is happening and if caught in time, how to safely treat it with an FDA cleared, non-pharmaceutical and permanent Solution.

**The symptoms** to look for include: mouth breathing, snoring, teeth grinding, swollen tonsils, adenoids, bed wetting, ADHD behaviors, arrested growth, academic challenges in science, spelling & math, chronic allergies, nightmares, aggressive behavior, depression, social problems, interruptive restless sleep, dark circles under the eyes, morning headaches, sleep walking and talking, difficulty listening, crooked, crowded teeth, narrow pallet and thumb or digit sucking.

Sleep Disordered Breathing has the attention of the ADA, preparing to make a statement regarding pediatric patient care in the role of dentistry.

Being devoted to educating doctors, Ortho-Tain® HEALTHYSTART™ offers certified training in live CE Courses or online. Register for on-line classes and see full details offered with the First 100 Doctors in the HealthyStart™ Digital Education Series at HealthyStartDigitalEducation.com, call 844-Kid-Healthy or go to TheHealthyStart.com.
