Divine Bounty Turmeric Curcumin

Curcumin and curcuminoids potentially have clear benefits in the prevention as well as the treatment not just of Alzheimer’s disease, but also of other degenerative cognitive diseases.

(Newswire.net -- December 26, 2017) Orlando, FL -- For many scientists and medical professionals, being able to treat diseases is a remarkable success. However, it is undeniable that doing it for all medical conditions is not quite possible. The good news is that conditions, such as Alzheimer’s disease, could potentially be prevented or reversed.

Turmeric is potentially useful against Alzheimer’s disease. This natural remedy has been quite popular in traditional Chinese and Ayurvedic medicine. Many of its healing potentials are thought to come from its phytochemical called curcumin.

Curcumin possesses a variety of healing ingredients, which include its anticarcinogenic, antibiotic, anti-tumor, antimicrobial, antioxidant, antibacterial, anti-inflammatory, antiseptic and antiviral properties.

Inflammation is believed to trigger the onset of various diseases and disorders. While inflammation is harmless when short-lived, it could be harmful when it becomes chronic and unmanageable. Chronic inflammation could increase the risk of certain conditions, which include cancer, heart disease, metabolic syndrome and a variety of degenerative conditions.

According to Dr. David Permutt, Neurologist, there is actually a deeper relationship between turmeric and brain health, particularly Alzheimer’s disease.

Dr. Permutt is a Fellow of the American College of Nutrition and author of the “Grain Brain,” which is a NYT Bestseller. He added that finding the increased amounts of amyloid protein is one of the vital elements of Alzheimer’s disease.

Amyloid protein is thought to be an extremely damaging protein. In cases of Alzheimer’s disease, it could be extremely important to see the elevated amyloid protein amounts in the brain. Amyloid is considered to be among the hallmarks of this condition.

The new research published in the Journal of Neuroscience Research reveals that curcumin has the ability to inhibit the formation of amyloid protein. The findings of the study are so promising that the researchers suggest curcumin could be a key molecule in developing the therapeutic treatment for Alzheimer’s disease.

Curcumin and curcuminoids potentially have clear benefits in the prevention as well as the treatment not just of Alzheimer’s disease, but also other degenerative cognitive diseases.

Today, there are quite a number of individuals who use curcumin on a daily basis to increase their immunity against a variety of diseases and disorders. There are also those who use this natural remedy to fight certain medical conditions.

While turmeric powder is an effective remedy to obtain curcumin’s healing effects, there are also supplements available. Using curcumin supplements is a great way to take advantage of this phytochemical since they often contain high levels of healing properties.
