D-Mannose contains proanthocyanidins, which is a type of antioxidant. It has been found that this powerful antioxidant may decrease the ability of bacteria to stick to the urinary tract walls.

(Newswire.net -- January 17, 2018) Orlando, FL -- Antioxidants have long been thought to be beneficial for overall health. These natural ingredients can be found in various plant-based sources, and are considered to be useful for fighting urinary tract infections.

D-Mannose antioxidants are potentially beneficial for urinary health. While this sugar is glucose-related, it doesn’t behave like sugar in the body. It is believed to be helpful in fighting urinary tract infections, and this is due to a possible ability to inhibit bacteria from binding to the urinary tract walls. If bacteria can’t adhere onto the bladder, it is less likely to trigger an infection.

There are many who are prone to having repeated bladder infections. What makes this natural alternative potentially beneficial is that it is thought to significantly improve one’s quality of life. It also has a high potential for decreasing the reliance of UTI sufferers on antibiotics. Antibiotics are often necessary, but they may also have detrimental effects on immune system health.

This natural molecule can be found in apples, cranberries, and some other fruits, and is considered to be an active ingredient in cranberries. Individuals with bladder infections are often advised to avoid sugar due to the fact that it may encourage the growth of harmful bugs, and it also fuels infection.

D-Mannose contains proanthocyanidins, which is a type of antioxidant. This type of antioxidant was first found in pine bark and grape seeds, but they are also extracted in cranberries. It has been found that this powerful antioxidant may decrease the ability of bacteria to stick to the urinary tract walls.

In the United States, urinary tract infections are a very common medical problem. As a matter of fact, they impact around 20 million individuals in the U.S. every year. Women are more likely to have the infection than men.

Individuals who suffer from this infection typically experience symptoms such as urination urgency or frequency as well as burning pain while urinating. It has also been observed that in men, the symptoms of UTIs are often more mild.

There are many men who do not suffer from any symptoms at all and may not be aware that they have the infection. When a UTI affects men, it causes inflammation in the prostate gland. When not properly addressed, it could lead to chronic prostate problems.

To experience the potentially therapeutic benefits of this natural alternative, consumers may want to consider the use of Purest Vantage’s D-Mannose formula.
