D-Mannose Is a Natural Antibiotic for the Urinary Tract

Melissa Scott  February 26, 2018

D-Mannose can decrease bacteria in the urine within just a day of use. To experience the therapeutic effects of this natural remedy, you may take into account the use of Divine Bounty’s D-Mannose.

(Newswire.net -- February 26, 2018) Orlando, FL -- Excessive levels of bacteria in the urinary tract could trigger the onset of infections. The good news is that there are ways to increase protection against such a condition.

D-Mannose is a natural antibiotic for the urinary tract. This sugar is popularly found in cranberry juice, which is why this drink is widely preferred in individuals with the infection. It has been found that the method of absorption performed by D-Mannose is what makes it beneficial in the treatment of infections in the urinary tract and the bladder.

This sugar, carbohydrate part of the plant is neither easily nor effectively absorbed by the human body and does not readily penetrate the blood stream.

In some preliminary research, it was found that 90 percent of mannose orally administered is flushed out in the urine unaltered within 30 to 60 minutes. Since it is not metabolized like some other sugars in the body, it doesn’t have the ability to alter blood sugar levels. Its components are also not filtered directly into the bladder.

During the process of excretion of D-Mannose, it essentially passes through the kidneys. It the fills the bladder and empties out the entire urinary tract during urination. It is worth understanding that the sugars in D-Mannose cover the lining not just of the urinary tract but also the bladder.

This happens as they pass through the body. They shield mucus membranes and at the same time cover the bacterial cells, and this inhibits them from sticking to the walls or the bladder or urinary tract. Further, bacteria is able to stay free floating and are eliminated in the urine.

According to statistics, up to half of the women population will experience urinary tract infection in their lifetime. Some researchers suggest that this infection is often caused by Escherichia coli (E. coli). This bacteria has been found to be responsible for 90 percent of all urinary tract infections.

These are normally found in the gastrointestinal system. However, it doesn’t belong to the urinary tract. When there is overgrowth of E. coli in the urinary system, it could potentially lead to the development of an infection. D-Mannose has been found to get rid of the E. coli bacteria from the body.

According to the Pub Med study results, which was performed at NIH, D-Mannose can significantly decrease bacteria in the urine within just a day of use. To experience the therapeutic effects of this natural remedy, consumers may take into account the use of Divine Bounty D-Mannose formula.

This amazing formula is highly potent and pure, and it even comes with a complete customer satisfaction guarantee.
