Rhodiola Rosea May Fight Inflammation Linked With Heart Problems

Melissa Scott March 06, 2018

Divine Bounty™s Rhodiola Rosea has the potential to suppress inflammation and offer protection to heart health. It also regulates heartbeat and fight heart arrhythmia.

(Newswire.net -- March 6, 2018) Orlando, FL -- Heart conditions are considered to be one of the major causes of mortality in many areas around the world. The good news is that many researchers are conducting studies to investigate the health-based effects of certain natural alternatives.

Rhodiola rosea may potentially fight inflammation linked with heart problems. This natural ingredient has been widely recognized for its possible ability to combat stress. It is an all-natural ingredient that is widely studied due to the variety of possible benefits it may offer.

This natural alternative is widely taken through supplementation, such as the use of Divine Bounty’s Rhodiola rosea formula.

According to statistics, more than 60 million people in the United States suffer from a certain form of cardiovascular disease. A substantial minority of this population, about 13 million, struggles with coronary heart disease (CAD).

This condition is the top cause of death in the United States. Further, the health care costs of heart disease have also reached more than $200 billion per year.

In the medical world, it has long been accepted that having high LDL cholesterol levels significantly increases the risk of cardiovascular disease. This is due to the fact that they foster the development of atherosclerosis, which pertains to a scenario where there is buildup of cholesterol-rich plaques in the blood vessels.

Chronic inflammation is also a major contributory factor of this condition. The C-reactive protein (CRP) is a protein that is manufactured and released by the liver to respond to acute or chronic inflammation. In a study, it was found that individuals with high CRP who suffered from their first heart attack were strongly predictive of future heart attacks. In another study, it was found that CRP is a better indicator of cardiovascular events than LDL-cholesterol.

In a separate study, it was found that Rhodiola Rosea was able to suppress inflammatory muscle damage, which happens when there are increases in both CRP and CK levels. CK pertains to creatine kinase, which is an enzyme found in the skeletal muscles, brain and heart.

Researchers suggest this natural alternative has the potential to suppress inflammation and offer protection to heart health. It is also thought to regulate heartbeat and fight heart arrhythmias. It may even decrease the risk of heart attacks, atherosclerosis and strokes.

There are many other possible benefits linked with the use of this natural ingredient. To experience its potential effects, many prefer to use Divine Bounty’s Rhodiola Rosea formula, which is popularized by its high potency and purity.

This formula has been found to be helpful in delivering the potentially therapeutic goodness of Rhodiola Rosea. What makes it even more beneficial is that it is protected with a complete customer satisfaction guarantee.
