Divine Bounty Curcumin formula has been thought to be potent and safe to use. It even contains black pepper extract. Black pepper could increase curcumin absorption inside the body.

(Newswire.net -- April 10, 2018) Orlando, FL -- Spices like turmeric have long been believed to be extremely therapeutic. This natural remedy has even been thought to be a safer alternative to pain medications against arthritic conditions.

Turmeric has amazing multiple benefits against osteoarthritis. This condition occurs due to wear and tear to the joint cartilage. This is the most common type of arthritis condition. As a matter of fact in the United States alone, there are about 27 million individuals who suffer from osteoarthritis.

Individuals who suffer from this condition normally experience pain, stiffness and swelling. Osteoarthritis affects the knees, hips, spine and hands. There are factors believed to contribute to the development of this condition, such as metabolism, genes, age, and mechanical and chemical factors.

Turmeric contains not just anti-inflammatories, but also anticarcinogenic, antibacterial, antitumor, antiviral, antiseptic, antimicrobial, and antioxidant properties.

The anti-inflammatory properties of turmeric could help curb the production of inflammatory cytokines in osteoarthritis cases. It could also suppress chondrocytes’ metabolic activity as well as prevent cartilage degradation.

In 2016, the Genes & Nutrition recently published a study that reveals the combination of curcumin and tetrahydrocurcumin was more effective than hormone therapy in attenuating the symptoms of osteoarthritis. It was also effective against postmenopausal pain.

The antioxidants of curcumin have also been thought to be useful against the condition. Antioxidants have long been believed to be extremely therapeutic.

The Journal of Dietary Supplements published a study that demonstrated the ability of curcuminoids to reduce oxidative stress in cases of osteoarthritis.

It is further worth mentioning that curcumin has been found to be a chondroprotective agent, which works by protecting bones. It could also prevent cartilage degradation and prevent the cell death of bone cells. It could inhibit the activity of pro-inflammatory enzymes from cartilage degradation.

Curcumin could also act as a natural painkiller. This phytochemical could curb inflammation and provide pain relief.

In a study, it was found that turmeric extracts were as effective as a pharmaceutical drug in attenuating stiffness and pain in individuals with osteoarthritis. It could be a safer alternative to nonsteroidal anti-inflammatory drugs (NSAIDs), which are typically used by individuals with arthritis.

To take advantage of the healing effects of this healing ingredient, consumers may turn to the use of Divine Bounty Curcumin supplements. This formula has been thought to be potent and safe to use, and even contains black pepper extract. Black pepper could increase curcumin absorption inside the body.

Divine Bounty has been believed to be one of the most competitive and trusted sources of high-quality and effective health-enhancing products.
