Resveratrol supplements could deliver abundant levels of this compound’s therapeutic properties, nourishing consumers with health-enhancing and disease-fighting properties.

(Newswire.net -- April 6, 2018) Orlando, FL -- Today, there are many researchers and scientists who are trying to investigate some natural ingredients for their anti-inflammatory properties. One of these nutrients is resveratrol, which has a long history of medicinal use.

One study demonstrates resveratrol’s inflammation-fighting effects. This component of grapes, nuts and red wine has been discovered to aid with controlling inflammation inside the body.

According to the researchers from Georgia State University, it was effective at fighting inflammation induced by a certain bacterial pathogen, which is associated with upper respiratory tract inflammatory diseases. These include asthma, chronic obstructive pulmonary diseases (COPD) and middle ear infection (otitis media).

It is worth mentioning that the study was published in the online journal Scientific Reports.

This study tried to determine the novel mechanism in which resveratrol is able to alleviate inflammation in airways caused by disease. The results demonstrate that this powerful healing compound could produce health benefits and may be extremely useful for developing effective, newer anti-inflammatory therapeutic agents.

According to Dr. Jian-Dong Li, resveratrol could potentially suppress inflammation. However, it not yet known how it regulates inflammation.

Dr. Jian-Dong Li is a senior author of the study, director of the Institute for Biomedical Sciences at Georgia State and a Georgia Research Alliance Eminent Scholar.

The researchers found that this natural ingredient was able to suppress a major bacterial pathogen, which causes otitis media and COPD. It did so by simply increasing or upregulating the production of MyDD88 short, which is a negative regulator.

Resveratrol has long been popularized by its antioxidant properties. However, it also has a long history of therapeutic use against a variety of inflammatory diseases.

The study revealed that resveratrol was able to fight inflammation caused by a major respiratory pathogen called nontypeable Haemophilus influenzae (NTHi).

It could be potentially useful for individuals suffering from certain types of upper respiratory tract inflammatory diseases. These include asthma and COPD, which actually affects over half a billion individuals worldwide.

Purest Vantage Resveratrol could be a reliable source of this inflammation-fighting natural compound. This formula is carefully crafted in a Good Manufacturing Practices (GMP) facility.

Being GMP certified, it only means it is manufactured according to the high standards and strict guidelines set by the U.S. FDA.

Resveratrol supplements could deliver abundant levels of this compound’s therapeutic properties. Purest Vantage ensures that consumers are nourished with the health-enhancing, disease-fighting properties of this compound.

What makes Purest Vantage Resveratrol even more beneficial is that it is protected with a money back guarantee. It is also pure and free from nasty ingredients and contaminants.
About PUREST VANTAGE

Purest Vantage is passionate and dedicated to developing high-quality products that assist people in maintaining optimal health, enabling them to enjoy all the benefits a healthy lifestyle offers.
