Turmeric’s miraculous healing effects could benefit liver health. This Ayurvedic spice is popularized by the therapeutic agents it contains, such as curcumin.

(Newswire.net -- April 30, 2018) Orlando, FL -- For many centuries, humans have been relying on the use of natural remedies like turmeric to improve overall health. Turmeric is an Ayurvedic spice believed to be beneficial for the body and organs, such as the liver.

Turmeric’s miraculous healing effects could benefit liver health. This Ayurvedic spice is popularized by the therapeutic agents it contains, such as curcumin. According to some experts, curcumin possesses a variety of powerful healing agents.

In many studies, it has been found that curcumin has antibacterial, anticarcinogenic, antiviral, renoprotective, anticoagulant, immunomodulating, antitumor, androgenic, antinflammatory properties.

Fatty liver is a condition that affects quite a number of people nowadays. Obesity and diabetes continue to be the two major health threats, and this is alarming considering that these conditions could significantly increase the risk of fatty liver. The polyphenols in turmeric have been found to reduce the risk of stress and fatty liver at a cellular level.

The Archives of Animal Nutrition published a recent study in December 2015. This study tried to determine the effects of turmeric in the livers of cows. The stress experienced by the subject cows has been thought to come from the dirty and crowded conventional feedlots. Stress could cause physiological changes in the livers of animals and humans.

According to some experts, when there is physiological stress in the endoplasmic reticulum of the liver, it could increase the risk of fatty liver. In the study, there was a group of cows treated with a combination of turmeric and green tea.

The researchers found that in the turmeric treated group, there was a dramatic decrease in the major stress hormone of the liver. They further found that there was a reduction in the irritation markers, which also decrease the likelihood of fatty liver to develop.

Maximizing the therapeutic benefits of curcumin could mean taking into account the use of VitaBreeze Curcumin Supplements. This extra strength formula offers 50 percent more potency and 50 percent more capsules. It offers 180 vegetarian capsules per bottle, and every capsule is equipped with 750 mg of curcumin.

This potency makes it superior over other brands that only offer 500 mg per capsule. What makes this formula even more interesting is that it also contains 5 mg of black pepper extract. This black pepper extract increases curcumin absorption inside the body.

This formula is not just potent, but also safe and pure. It is free from unwanted, nasty ingredients such as binders, fillers, GMOs and preservatives. It even comes with a customer satisfaction guarantee, which provides consumers with an opportunity to get a refund.
