New Research Suggests Zinc May Help Fight Liver Disease

Melissa Scott  June 19, 2018

Divine Bounty Men’s Multivitamins is one of the formulas that could deliver the liver-health-protecting effects of zinc. It is loaded with a range of healing properties.

(Newswire.net -- June 19, 2018) Orlando, FL -- Clinical trials and research studies have been conducted to learn how liver health can be protected. It may be kept healthy by simply avoiding excessive alcohol consumption, and increasing intake of nutrients.

New research from the Westmead Institute’s Storr Liver Centre in collaboration with the Centre for Virus Research and Kirby Institute, suggest that serum zinc may be beneficial for the liver.

Scientists highlight zinc's potential as a useful and effective therapy against hepatitis C, influenza, and some other viral infections.

Dr Scott Read and Associate Professor Golo Ahlenstiel led the study. This research particularly suggests that zinc may naturally inhibit inflammatory, as well as antiviral effects of interferon lambda 3 (IFN-λ3).

In case of chronic liver disease, this protein is strongly linked with tissue damage. Dr. Read suggests that the study has provided the first evidence regarding zinc as a potent and specific inhibitor of IFN-λ3.

This is in the context of viral infections, such as influenza and hepatitis C.

It is in the Nature Communications where this research was published online.

According to researchers, they have demonstrated that zinc has an ability to inhibit numerous facets of the immune response of the liver to viruses. This is speculated to be mediated by IFN-λ3.

Scientists suggest that zinc was able to interfere with the binding of IFN-λ3 to interferon lambda receptor. This leads to decreased antiviral activity, as well as increased viral replication.

While it is hard to deny that the liver is extremely important for health, many are still following an unhealthy diet and lifestyle.

It is important to understand that the liver needs to have all the nutrients it can get to stay healthy. When it is constantly exposed to alcohol and toxins, it may be overburdened and may even be susceptible to various diseases and disorders.

There are certain multivitamins that are loaded with zinc and some other health-enhancing, disease-fighting nutrients.

Divine Bounty Men’s Multivitamins is one of the formulas that could deliver the liver-health-protecting effects of zinc. What makes it even more beneficial is that it is loaded with a range of healing properties.

This amazing formula is crafted carefully in an FDA-inspected facility. It is gaining more and more attention and trust from male consumers. Men may benefit from this supplement since it is specifically formulated to satisfy men’s nutritional needs.

It has vitamin A, C, D, E, K, thiamin, riboflavin, vitamin B6, folate, vitamin B12, biotin, pantothenic acid, calcium, phosphorous, iodine, magnesium, zinc, selenium, copper, manganese, chromium, and molybdenum.

It also has Men's Blend, Amino Acid & Enzyme Blend, Immune Blend, Brain Blend and Heart Blend.
