Incredipure curcumin supplement contains black pepper extract, which is thought to be significantly helpful in increasing the delivery of curcumin inside the body.

(Newswire.net -- June 29, 2018) Las Vegas, NV -- Curcumin, which is a phytochemical found in the ancient, medicinal spice called turmeric, has long been used to improve liver health. It has been a subject of various studies conducted by researchers who were aiming at exploring more of the healing effects of the phytochemical.

One research study reveals curcumin’s healing effects against liver fibrosis. The use of turmeric for medicinal purposes dates back thousands of years. As a matter of fact, this spice has been used in traditional Chinese medicine and Ayurveda for various medicinal purposes.

Curcumin has been scientifically popularized by the therapeutic agents it contains. Some of these healing agents are its antibacterial, anticarcinogenic, antioxidant, anti-inflammatory, antiseptic, antiviral, anti-tumor, antimicrobial and anticoagulant properties.

According to the research studies conducted by Anping Chen, PhD, director of research in the pathology department at Saint Louis University, curcumin has the potential to prevent and treat liver fibrosis. It is important to understand that liver fibrosis has been associated with non-alcoholic steatohepatitis (NASH).

The American College of Gastroenterology (ACG) reveals that non-alcoholic fatty liver refers to a group of medical conditions that develop due to excess fat buildup in the liver of people who drink little to no alcohol.

Experts further reveal that fatty liver is a non-severe form of nonalcoholic fatty liver. Its critical version is called the non-alcoholic steatohepatitis (NASH). NASH sufferers typically suffer from liver scarring as well as liver cell inflammation.

The ACG further reports that there are 20 percent of adults affected by non-alcoholic fatty liver disease, and 5 percent of children. Obesity has been identified to be one of the contributory factors of fatty liver. According to statistics, 20 percent of individuals who are obese suffer from NASH.

It is worth mentioning that NASH could potentially result in the development of a more severe type of liver damage called liver fibrosis. It could also lead to cirrhosis, liver cancer and death.

There are curcumin supplements available for individuals who want to take advantage of the healing effects of this natural remedy. One of the options believed to be safe and potent is the curcumin supplement offered by Incredipure.

Incredipure is widely thought to be one of the reliable and trusted sources of dietary supplements. This company is dedicated in ensuring that the supplements they make available in the market are able to provide the results being promised.

One of the best things about using this product is that it contains black pepper extract, which is thought to be significantly helpful in increasing the delivery of curcumin inside the body.

About Incredipure

Incredipure is a small inutraceutical company specializing in herbal supplements. Manufactured in the United States following strict GMP guidelines, all products are made using only the highest quality ingredients from suppliers within the U.S.
