This is one of the many professional security products that South Bay provides in a wide array of innovative products.

South Bay Communications & Security announced the availability of their new Video Surveillance "Avigilon Video Surveillance."

(Newswire.net -- November 9, 2018) -- South Bay Communications & Security announced the addition of Avigilon Video Surveillance to their list of security products and services. Customers looking for top of the line video surveillance cameras in Hampton Roads and Northeast North Carolina can now get assistance from an authorized partners.

This is one of the many professional security products that South Bay provides in a wide array of innovative products. Everyone within the business is glad to have Avigilon as part of the company. Those within South Bay Communications & Security feel that "These features can greatly enhance the way you interact with your systems, which can dramatically improve event response times and help make video actionable."

Dr. Mahesh Saptharishi, Avigilon's Chief Technology Officer, when asked about Avigilon Video Surveillance said,

"Today, most recorded video footage is never viewed, meaning critical events may go undetected. Avigilon is using artificial intelligence technology like UMD to help our customers effectively extract valuable insights from their video data. As UMD technology continues to evolve, it will provide operators with advanced capabilities for both forensic investigations and real-time preventative security."

Consumers active in the telecommunications market will be interested to know Avigilon Video Surveillance has been developed with business owners and security directors in mind.

For example, it will feature "Powerful AI Solutions". This was included because to further improve the kind of camera systems that can better perform safety and surveillance solutions.. Consumers should be pleased with this since with its ability to alert with people at times of critical events, and its capability to search and locate specific objects of interest, this product can increase the sense of security towards the people in an entire site.

Avigilon Video Surveillance will also have an AI Appliance. Developers decided this was critical to the final product in order to provide a higher performance capability, capacity and resiliency. Customers should enjoy this particularly, as this feature can simultaneously support Avigilon video analytics and Appearance Search technology.

One final piece of information being released, states that the new video surveillance will also have License Plate Recognition Cameras - Dr. Mahesh Saptharishi said "This was important because at events and instances that it's crucial to obtain character recognition at typical vehicle speeds, the Avigilon H4 LPC camera can capture vehicle license plates. This will be great news for our buyers because even in challenging situations and environmental conditions, the Avigilion Licence Plate Recognition can clearly capture and identify license plate characters, further increasing the effectivity and efficiency of surveillance systems and technology."
