D-Mannose has been found to produce some relief in UTI symptoms, which include painful urination urgency to empty bowels, frequent urination, and nighttime urination.

(Newswire.net -- January 11, 2019) Orlando, FL -- Urinary tract infections cause painful, discomforting symptoms. While there are antibiotics available, it is worth mentioning that these medications are not at all a perfect solution for the infection.

Every year, around 8.1 million people see the doctor because of UTIs. While it can happen to both genders, it is usually more common in women.

Studies have shown that women tend to have a lifetime UTI risk of more than 50 percent. It produces symptoms, such as a painful and burning sensation while peeing, and a strong, frequent urge to urinate.

Aside from being a woman, being pregnant is also a risk factor. There are other risk factors like diabetes and sexual intercourse, particularly if it is done with multiple partners. The development of UTIs may also be due to bowel incontinence, using a urinary catheter and some forms of contraception, and blocked urine flow.

While antibiotics are helpful, it is important to understand that they often cause some adverse effects. One is antibiotic resistance, which is considered to be a major global health threat.

Remedying UTIs can be made through the use of D-Mannose, which has long been used as a safer alternative to antibiotics.

According to many researchers, D-Mannose has been able to demonstrate its ability to fight and reduce the risk of recurrent UTIs.

D-Mannose could be an excellent formula for recurrent UTIs, and even in individuals who are prone to the infection. It binds with the E. coli bacteria that cause the infection, and then eliminates them from the body.

It works naturally so its use is not linked with the dangerous side effects usually caused by antibiotics.

In a study, researchers had 43 women with an ongoing UTI and/or a history of recurrent UTIs. The investigators treated the subjects with D-Mannose two times a day for three days consecutive and once a day for 10 days.

On Day 15, 90.7 percent of the female subjects exhibited treatment success. This means that there were no bacteria cultures detected in urine.

D-Mannose has been found to produce some relief in UTI symptoms, which include painful urination, urgency to empty bowels, frequent urination, urinary urgency, pain, and nighttime urination.

To experience its benefits, it is wise to take into account the use of Purest Vantage D-Mannose. This therapeutic remedy works wonders in delivering the therapeutic benefits of the natural ingredient.

It is popularized widely by its high potency, which is one of the major reasons why it is believed to be superior than other brands.
