Curcumin, on the other hand, is a phytochemical that can be found in turmeric. It is worth mentioning that turmeric is an ancient, Ayurvedic spice that is used in preparing curry dishes.

(Newswire.net -- April 10, 2019) Orlando, FL -- There are many people who struggle with brain disorders like Alzheimer’s disease. While there are medications available, many clinicians and researchers are exploring the therapeutic benefits some natural remedies can offer.

Curcumin exhibits new hope for Alzheimer’s disease patients. This neurological disorder takes place when brain cell death leads to memory loss and cognitive decline. It is considered to be the most common type of dementia, which pertains to a loss of mental ability linked with gradual brain cell death.

It has been estimated that 5.3 million individuals in the United States suffer from Alzheimer’s disease. It has further been found that in every 67 seconds, someone in the county develops the condition.

Curcumin, on the other hand, is a phytochemical that can be found in turmeric. It is worth mentioning that turmeric is an ancient, Ayurvedic spice that is used in preparing curry dishes. It is also popularly known for its strong medicinal potentials.

The curcumin it contains are a source of a variety of therapeutic agents. This includes antibacterial, anticarcinogenic, antiproliferative, antiviral, renoprotective, anticoagulant, antiseptic, antioxidant, anti-cytotoxic, insulin-sensitizing, androgenic, antifibrotic, genoprotective, and metal-chelating properties.

It has also been found to have antibiotic, antimicrobial, anti-purulent, immunomodulating, anticatabolic, anti-amyloidogenic, antifungal, anti-inflammatory, and neurorestorative agents.

This phytochemical is popularized by its ability to clear the amyloid plaque. It is important to understand that the amyloid plaque in the brain is a contributor to Alzheimer’s disease.

Researchers further suggest that curcumin may have the potential to prevent as well as slow down the progression of Alzheimer’s disease, Parkinson’s, and some other neurodegenerative conditions.

The Journal of Psychopharmacology published a study in 2015. This study involved a dose of 400 mgs of enhanced-absorption curcumin, which was received on a daily basis by older adults 60 to 85 years of age.

In just one hour after a single dose, the group receiving curcumin performed better on tasks that required concentration as well as working memory. When curcumin was administered for four weeks, the participants felt more alert and content. They also achieved certain improvements in their memory test scores.

More studies are still underway to validate these therapeutic effects of curcumin. However today, there are many people who take curcumin supplements on a daily basis to experience its healing effects.

Divine Bounty Curcumin formula is believed to be one of the best choices. It is highly potent and pure, and is even protected with a complete customer satisfaction guarantee (http://amazon.com/Turmeric-Curcumin-BioPerine-Pepper-Extract/dp/B00VSVKJ8I).

About Divine Bounty

Divine Bounty is a family-owned brand that manufactures high-quality turmeric curcumin supplements. Passionate about the potential health benefits of turmeric, the team behind Divine Bounty have carefully researched and sourced only the best ingredients to create the ideal blend of turmeric curcumin.
