Divine Bounty Turmeric Curcumin

Curcumin is a natural remedy could halt cancer development by interfering with the chronic disease's cellular signaling aspects.

([Newswire.net](https://www.newswire.net) -- June 11, 2019) Orlando, FL -- For many people, medications can help fight diseases and disorders. However, many health experts have long been suggesting that it is a lot better to prevent medical conditions than cure them. This is especially true in fighting diseases that could place one in a life-threatening situation.

Curcumin could be a preventive remedy against fatal conditions. This powerful healing phytochemical can actually be found in turmeric, which is an ancient, medicinal spice.

Turmeric is actually this deep yellow orange-colored spice that is native to India and Indonesia. It is popularly known for its culinary and therapeutic benefits. For over 5,000 years, this spice has been cultivated and used in traditional Chinese and Ayurvedic medicine.

Curcumin is popularized by the healing agents it possesses. anti-cytotoxic, antibiotic, antimicrobial, anti-purulent, antioxidant, anti-amyloidogenic, insulin-sensitizing, androgenic, antifibrotic, genoprotective, antifungal, anti-inflammatory, neurorestorative, and metal-chelating properties.

It also has immunomodulating, anticatabolic, antibacterial, anticarcinogenic, antiproliferative, antiviral, renoprotective, anticoagulant, and antiseptic agents.

Due to these healing agents, this phytochemical has been found to fight flatulence, jaundice, menstrual discomforts, toothache, chest pain, urinary tract infection, bruises, hemorrhage, and colic.

According to some experts, this phytochemical has a great potential to help prevent various forms of cancers due to its antioxidant and anti-inflammatory properties. It could potentially fight cancers in the breast, lung, stomach, liver, and colon.

It has been found that this natural remedy could halt cancer development by interfering with the chronic disease's cellular signaling aspects. It is capable of inhibiting COX-2, which is an enzyme that causes negative inflammation and can lead to cancer.

Curcumin has been found to induce a tumor suppressor gene and impeded vascular epithelial growth. Through this action, cancer cells can be starved of their oxygen and fuel source. What makes it even more beneficial is that it could stop metastasis of cancer cells.

What makes it even more beneficial is that it could kill large cell B-cell lymphoma cells, which are found to be the most common cause of non-Hodgkin lymphoma. It could even prevent regrowth of cancer stem cells.

In 2011, a study was conducted by the University of Texas MD Anderson Cancer Center. The researchers found that this phytochemical activated apoptosis or cancer cell death.

There are many other benefits linked with the use of curcumin. This is why many people are turning to its use through supplementation. One of the supplements to consider is Divine Bounty Curcumin formula, which is highly potent and pure.

It is always best to choose the right curcumin supplement to experience its healing effects. This formula from Divine Bounty doesn't only contain curcumin, but also black pepper. This bioavailability-enhancing ingredient increases curcumin absorption inside the body (<https://amazon.com/Turmeric-Curcumin-BioPerine-Pepper-Extract/dp/B00VSVKJ8I>).

About Divine Bounty

Divine Bounty is a family-owned brand that manufactures high-quality turmeric curcumin supplements. Passionate about the potential health benefits of turmeric, the team behind Divine Bounty have carefully researched and sourced only the best ingredients to create the ideal blend of turmeric curcumin. More details are available at <http://www.DivineBounty.com>.
