([Newswire.net](https://www.newswire.net) -- June 25, 2019) Orlando, FL -- Hair loss is absolutely not a fatal condition, but its effects to one's self-esteem could be catastrophic. There are many hair care products available in the market today. However, it is always wise to consider what certain natural remedies can do for hair health.

Curcumin could be an all-natural solution for hair loss. This phytochemical is widely studied due to the variety of healing agents it possesses. It contains antibacterial, anticarcinogenic, antiproliferative, antiviral, anti-cytotoxic, antibiotic, antimicrobial, anti-purulent, immunomodulating, anti-inflammatory, neurorestorative, and metal-chelating properties.

It even has anticatabolic, anti-amyloidogenic, insulin-sensitizing, androgenic, antifibrotic, genoprotective, antifungal, renoprotective, anticoagulant, antiseptic, and antioxidant agents.

This phytochemical has been found to have a potential in fighting conditions like osteoarthritis, digestive disorders, autoimmune disorders, Type 2 diabetes, and inflammation-related diseases.

It is popularized widely by the strong inflammation-fighting effects it could offer, and this is believed to be how it fights hair loss and promotes hair regrowth.

In a study from South Korea, the transforming growth factor beta 1 (TGF-beta1) was involved. According to researchers, this protein is linked with hair follicle inflammation as well as hair loss. It becomes active when exposed to androgens, such as dihydrotestosterone (DHT).

The researchers added DHT to human epidermal cells, and this led to an increased in TGF-beta1 levels. However when they were treated with curcumin, the investigators noticed a reduction in the TGF-beta1 levels.

They suggest that this phytochemical called curcumin has a potential to decrease inflammation via TGF-beta1 suppression. Thus, it could be a potentially effective treatment for hair loss linked with inflammation.

Some studies further suggest that curcumin could reduce hair follicle inflammation, which is considered to be a symptom of the hair loss process. It is important to understand that in some studies, hair follicle inflammation has been found to happen in around 40 to 50 percent of individuals with hair loss or androgenetic alopecia.

Nowadays, curcumin is widely consumed through supplementation. Many people are taking curcumin supplements for preventive health purposes. One of the reasons is that this natural remedy has been found to ward off a range of diseases and disorders.

Divine Bounty Curcumin formula could be an excellent formula for individuals who want to experience the therapeutic goodness of this natural remedy. This supplement is popularized widely by its high potency and purity.

It is GMP-certified and is even protected with a money back guarantee. This formula doesn't only have curcumin, but also black pepper extract. This means that it is carefully crafted for maximum absorption (<https://www.amazon.com/Turmeric-Curcumin-BioPerine-Pepper-Extract/dp/B00VSVKJ8I>).

## About Divine Bounty

Divine Bounty is a family-owned brand that manufactures high-quality turmeric curcumin supplements. Passionate about the potential health benefits of turmeric, the team behind Divine Bounty have carefully researched and sourced only the best ingredients to create the ideal blend of turmeric curcumin. More details are available at <http://www.DivineBounty.com>.
